

CRIME ALERT

There has been a rash of thefts of Catalytic Converters from vehicle in recent weeks. Many are occurring in Ann Arbor. The thieves are targeting vehicles parked in a driveway, street or open area. A cordless saw is used to cut the exhaust pipe and remove the catalytic converter.

The increase in thefts may be linked to the increase in value of the metal used to make the converters.

If possible put your car in your garage at night and report any suspicious persons in the neighborhood to the police immediately.
