For Immediate Release
June 26, 2008

Notice of Temporary Traffic Control Plan
Huron Parkway Bridge over the Huron River and Geddes Avenue
July 8, 2008 through July 10, 2008

Location and Limits of Affected Area:

Huron Parkway Bridge over the Huron River and Geddes Avenue between the Geddes/Fuller Road and Geddes Avenue Intersections

Description of Construction:

Replacement of the rubber longitudinal joint along the center line of the bridge

Temporary Construction Traffic Control Plan:

Beginning in the evening of July 8th and continuing through July 10th, we will be replacing the rubber longitudinal joint that runs along the centerline of the bridge. In order to install the rubber joint, it will be necessary to close the center lanes of the bridge to traffic.

Due to temperature limitations, we will be performing some preparatory work during daytime non-peak hours. We plan on installing the joint beginning in the early evening and continuing into the night. Our traffic control will be removed at the end of each night's work. We expect the work to take about two to three nights to complete and is highly weather dependent. In case of inclement weather, we anticipate re-scheduling the work as soon as possible.

Pedestrian and bicycle traffic will be maintained at all times during our work.

To maintain the safety of all, please reduce speeds and drive cautiously through work zones. We thank you in advance for your patience as these necessary improvements to our road system are completed. Please refer to the enclosed location map for further details.
