The packing blades shall be powered by two (2) 3 ½” Bore x 1 ¾” Rod x 19” stroke sweep cylinders with hardened chrome plated rods and two slide cylinders of the same size.

Material in the hopper shall be compacted between the packing panel assembly and the ejector panel. The ejector panel shall hold pressure against the compacted material and will automatically drift forward by a hydraulic load control valve without operator assistance.
**Ejection System:**

The load shall be ejected by a double acting, single stage, 4.5" bore telescopic hydraulic cylinder that shall extend and retract the ejector panel the full length of the body without the use of clamp bars or related hardware.

The ejector cylinder shall be mounted angularly to the body floor and not require a trough or depression in the floor.

The ejector panel shall have a 10 gauge hi-tensile steel face sheet that is reinforced by structural steel tubing and formed channels of high tensile steel.

The panel shall be mounted on 2 high-density polyethylene wear shoes that shall be replaceable without removing the ejector panel from the body. The panel shall be guided in the body by two tracks located on the body side 5" above the floor.

The tracks shall be 4" deep, fabricated from hi-tensile steel and full welded to the body sides.

---

**HYDRAULIC SYSTEM:**

The system shall be powered by a heavy duty cast iron gear pump with a rated capacity of 12 G.P.M. at 1200 R.P.M driven by a hot shift or air shift take off (PTO). The maximum operating pressure shall not exceed 2600 PSI.

The hydraulic system shall incorporate an adjustable relief in the body valve.

Hydraulic hoses and tubes shall use S.A.E. O-ring boss and JIC 37 degree flare fittings and tubes shall be secured by clamps to prevent damage from abrasion and vibration.

Hydraulic hoses and fittings shall comply with the applicable S.A.E. standards for the designed specifications and have a minimum of a 4:1 burst to working pressure safety factor.

The hydraulic oil reservoir shall have a 20-gallon minimum capacity and be equipped with filler, breather cap, sight glass, clean out cover, 100 mesh suction filter, magnetic tank drain plug and gate valve at the suction outlet. In addition the return line shall have 10 micron filter.

The hydraulic reservoir shall not be a structural member of the body or the mount for the ejector cylinder.

All hydraulic valves shall be sectional to allow for the replacement of defective sections without replacement of the entire valve.

---

**Controls:**

The ejector and tailgate lift controls shall be mounted at the driver’s side front of the body with the controls directly to the valve spool.

A throttle advance switch shall be located convenient to the ejector and tailgate lift controls.

The tailgate controls shall be located at the curb side rear of the tailgate. The two lever design shall have positive control of movement of the packing mechanism at all times and incorporate an automatic throttle advance device.

The tailgate control shall include an integral secondary relief valve to protect the sweep blade assembly.

ATTACHMENT A - CONTRACT COMPLIANCE FORMS

City of Ann Arbor Procurement Office
INSTRUCTIONS FOR CONTRACTORS

For Completing CONTRACT COMPLIANCE FORM

City Policy

The “non discrimination in contracts” provision of the City Code, (Chapter 112, Section 9:161) requires contractors/vendors/grantees doing business with the City not to discriminate on the basis of actual or perceived race, color, religion, national origin, sex, age, condition of pregnancy, marital status, physical or mental limitations, source of income, family responsibilities, educational association, sexual orientation, gender identity or HIV status against any of their employees, any City employee working with them, or any applicant for employment. It also requires that the contractors/vendors/grantees include a similar provision in all subcontracts that they execute for City work or programs.

This Ordinance further requires that each prospective contractor/vendor submit employment data to the City showing current total employee breakdown by occupation, race and gender. This allows the Human Rights Office to determine whether or not the contractor/vendor has a workforce that is reflective of the availability of women and under-represented minorities within the contractor’s labor recruitment area (the area where they can reasonably be expected to recruit employees). This data is provided to the City on the Human Rights Contract Compliance Forms (attached).

To complete the form:

1) If a company has more than one location, then that company must complete 2 versions of the form.
   - Form #1 should contain the employment data for the entire corporation.
   - Form #2 should contain the employment data for those employees:
     - who will be working on-site;
     - in the office responsible for completing the contract; or,
     - in the case of non-profit grantees, those employees working on the project funded by the City grant(s).

2) If the company has only one location, fill out Form #1 only.

3) Complete all data in the upper section of the form including the name of the person who completes the form and the name of the company/organization’s president.

4) Complete the Employment Data in the remainder of the form. Please be sure to complete all columns including the Total Columns on the far right side of the form, and the Total row and Previous Year Total row at the bottom of the form.

5) Return the completed form(s) to your contact in the City Department for whom you will be conducting the work.

For assistance in completing the form, contact:
Procurement Office of the City of Ann Arbor
(734) 794-6576

If a contractor is determined to be out of compliance, the Procurement Office will work with them to assist them in coming into compliance.
