

ADDENDUM No. 1

RFP No. 946

Automated Fuel Management System

Due: October 29, 2015 at 10:00 A.M.

The following changes, additions, and/or deletions shall be made to the Request for Proposal for Automated Fuel Management System RFP No. 946 on which proposals will be received on/or before October 29, 2015 by 10:00 A.M.

The information contained herein shall take precedence over the original documents and all previous addenda (if any), and is appended thereto. **This Addendum includes 19 page(s).**

Offeror is to acknowledge receipt of this Addendum No. 1, including all attachments in its Proposal by so indicating in the proposal that the addendum has been received. Proposals submitted without acknowledgement of receipt of this addendum will be considered nonconforming.

All of the forms provided in Section IV – Attachments of the RFP Document must be included in submitted proposals. Proposals that fail to provide these completed forms will not be considered for award.

I. CORRECTIONS/ADDITIONS/DELETIONS

Changes to the RFP documents which are outlined below are referenced to a page or Section in which they appear conspicuously. The Bidder is to take note in its review of the documents and include these changes as they may affect work or details in other areas not specifically referenced here.

<u>Section/Page(s)</u>	<u>Change</u>
------------------------	---------------

Page 3

As provided in RFP Document:

The City of Ann Arbor operates two fueling sites for its fleet of 670 vehicles and equipment. The main fueling site has two 15,000 gallon in-ground tanks one for each Bio-Diesel and Gasoline. The fuel is dispensed from two islands, one with three fast fill dispensers / 6 hoses for Bio-Diesel and the other has four dispensers / eight hoses split evenly between Gasoline and Bio Diesel. In the near future we will be adding a system to dispense Compressed Natural Gas (CNG) but it has not been determined if it will be fast fill or slow fill at this time.

As updated herein:

The City of Ann Arbor operates two fueling sites for its fleet of 670 vehicles and equipment. The main fueling site has two 15,000 gallon in-ground tanks one for each Bio-Diesel and Gasoline. The fuel is dispensed from two islands, one with **two** fast fill dispensers / **four** hoses for Bio-

Diesel and the other has **three** dispensers / **six** hoses split evenly between Gasoline and Bio Diesel. In the near future we will be adding a system to dispense Compressed Natural Gas (CNG) but it has not been determined if it will be fast fill or slow fill at this time.

Comment: This change is intended to simply correct that the total hose count at the main fueling site is ten (10) hoses.

II. QUESTIONS AND ANSWERS

The following Questions have been received by the City. Responses are being provided in accordance with the terms of the RFP. Respondents are directed to take note in its review of the documents of the following questions and City responses as they affect work or details in other areas not specifically referenced here.

Question 1: The solicitation indicates two fuel sites with a total of 17 dispensing hoses to be controlled (14 at the main site and 3 at the remote site). Can you tell me how many fuel island controllers will be needed for controlling the dispensing hoses at each site?

Answer 1: Please note the correction above to the number of dispensers and hoses at the Main site. The number of controllers should be based on your system, in our current system each controller can handle up to eight hoses so we have two controllers at the main site and one at the satellite site.

Question 2: The solicitation indicates that the fleet consists of 670 vehicles and that a non-intervention system must be proposed for authorization for fueling and data collection. Can you tell us how many vehicles are to be authorized using the non-intervention technology and how many should be identified using a card or key?

Answer 2: We would prefer that the fueling for all our asset be authorized without the need for any manual input from the employee but some of the assets will not have an electric power source (I.e. chainsaws, weed whips, and gas cans) so that may not be possible. We will require the system to give us the ability to fuel non-city assets like rental trucks.

Question 3: The solicitation indicates a requirement for the fuel management software to interface with a financial accounting application. Can you tell us the name and manufacturer of this software?

Answer 3: Logos from New World Systems

Question 4: May we have some photos of the fuel sites (should include an overall picture)?

Answer 4: We will make each available for your inspection and allow you to take photos if needed. To make arrangements please contact Thomas Gibbons via the contact information in the RFP. The sites will be available weekdays between 7:00 a.m. to 2:00 p.m.

- Question 5: According to the specifications for this project there is no site visit for contractors to determine what will be required for installation. Is it possible to provide addresses, contact names / numbers so that we can visit the locations independently to determine installation cost for our bid?
- Answer 5: Please see the answer above. The sites are located at Main Site – 4251 Stone School Rd, Ann Arbor, MI 48108 and the Satellite Site – 2000 S. Industrial, Ann Arbor, MI 48108. Each site is secured so please make arrangements for inspection in advance.
- Questions 6: The solicitation indicates that the fleet consists of 670 vehicles and that a non-intervention system must be proposed for authorization for fueling and data collection. For pricing purposes, we can either propose a per vehicle price for the non-intervention components and installation or we can provide pricing for all of the vehicles to be equipped. If you prefer the latter approach, all we will need to know is the number of vehicles to be equipped with this components and the number of equipment to be identified using a card or key.
- Answer 6: Please see the attached asset list. Although this is this is the most current list it is likely the makes and model of item will change before this project is completed.
- Question 7: Please provide photos of each fuel site including overall fuel site photos, dispensers, nozzles and existing fuel management site controllers
- Answer 7: See Question and Answer 4 above.
- Question 8: Main Site - As per the RFP the Main site has a total of 14 nozzles. Are all of them being controlled today by the existing system?
- Answer 8: No, One of the combination dispensers is currently out of service due to a control panel circuit board failure.
- Question 9: Second Site - It is not clear how many dispensers and nozzles in this site. Please clarify.
- Answer 9: The site has two, two hose dispensers and one stand alone tank/dispenser combination. Once the project is completed the location should be set to dispense two hose of gasoline, two hose of diesel and one hose of E-85.
- Question 10: Second Site - How many nozzles in the site and are all of them controlled today by the existing fuel management system?
- Answer 10: See Question and Answer 9 above.
- Question 11: Second Site - Please provide more details about the type of dispensers (suction pump etc.....) required as prices may vary
- Answer 11: We require one dispenser without a suction pump for gasoline (two hoses) and one dispenser with suction pump for Diesel fuel. The Diesel fuel dispenser should be set up with one hose for fast fill (large truck nozzle) and one for regular fill.
- Question 12: I just wanted to clarify you have only 2 fuel locations with 3 different terminals, is that correct?
- Answer 12: Please see correction listed above. Site # 1 (Main Site) has two islands, one with two dispensers, each with two Fast Fill Diesel hoses (total of 4 hoses), the other island has three dispensers each with one gasoline and one diesel hose (total of 6 hoses). Site one has a grand total of 10 hoses. Site two has one stand along

tank/dispenser unit with one hose, and one island with two dispensers one for each gasoline and diesel (these are the unit to be replaced) each dispenser has two hoses.

Respondents are responsible for any conclusions that they may draw from the information contained in the Addendum.
