### U.S. DEPARTMENT OF

Office of ENERGY EFFICIENCY & RENEWABLE ENERGY

## Geothermal Energy?

### **Fast Facts**

**Renewable:** Geothermal power plants around the world are still running after 50+ years. And geothermal heat has been used throughout human history!

**Reliable:** Geothermal is always available, regardless of weather conditions.

**Clean:** Geothermal emissions are as low as solar, wind, and hydropower.

#### Geothermal energy is visible on the surface as volcanoes, geysers, or hot springs.

# **GEOTHERMAL**

"Earth"

"Heat"

Literally "**heat from the earth**," geothermal energy is a renewable energy heat source found under the surface of the earth.

A geothermal heat pump circulates water through pipes buried in the ground, or submerged in a water body, to heat and cool a building's HVAC system. Reinjected water can replenish the geothermal reservoir.

> Heat from the Earth is brought up to the surface in the form of hot ground water and steam.
