

**NOTICE OF AVAILABILITY  
OF A  
FINAL ENVIRONMENTAL ASSESSMENT  
AND  
FINDING OF NO SIGNIFICANT IMPACT / RECORD OF DECISION  
FOR A  
PROPOSED RUNWAY EXTENSION PROJECT  
AT THE  
ANN ARBOR MUNICIPAL AIRPORT, ANN ARBOR, MI**

The Ann Arbor Municipal Airport (Airport) has completed final environmental documentation to address the proposed extension of Runway 6/24. The project is proposed to improve operational utility of the Airport by meeting takeoff and landing runway length requirements of aircraft that currently operate at the Airport and are projected to gradually increase operations over time. The proposed project is needed because Runway 6/24 was designed to serve primarily small piston driven aircraft; however, the Airport receives regular use by small turboprop aircraft and occasional business jet aircraft that require a longer runway to operate at a greater payload than they do today.

The proposed development at the Airport includes the following components:

- Shift Runway 6/24 to the southwest by adding an additional 150 feet on the Runway 6 end and removing 150 feet on the Runway 24 end
- Extend the runway 720 feet at the approach end of Runway 6 to provide 4,225 feet of total runway length
- Taxiway A – Extend parallel to the southwest to match the new Runway 6/24 length
- Taxiway A1 – Relocate 150 feet to the southwest and reconstruct
- Taxiway A4 – Construct new connector taxiway at the Runway 6 end
- Taxiway D – Relocate 150 feet to the southwest and reconstruct
- Related on-airport infrastructure improvements and other miscellaneous connected actions

ALL INTERESTED PERSONS are notified of the availability of the Final Environmental Assessment and Finding of No Significant Impact / Record of Decision that evaluated the potential effects of the proposed improvements at the Airport in compliance with applicable laws, regulations, Executive Orders, and FAA policies including FAA Order 1050.1F.
