1. INTRODUCTION

SME's project team prepared this report to document the results of a Baseline Environmental Assessment (BEA) of 350 South Fifth Avenue in the City of Ann Arbor, Washtenaw County, Michigan (hereinafter referred to as "the Property"). We conducted the BEA and prepared this report on behalf of the City of Ann Arbor, located at 301 East Huron Street, Ann Arbor, Michigan, which acquired the Property on July 3, 2018. The City of Ann Arbor does not have plans to redevelop the Property at this time.

We conducted this BEA pursuant to Section 20126 of Part 201 of the Natural Resources and Environmental Protection Act (NREPA), Public Act 451 of 1994, as amended (Part 201). This report was prepared in accordance with the Michigan Department of Environmental Quality (MDEQ) "Baseline Environmental Assessment Submittal Form" [Form EQP 4025 (07/2017)] and the MDEQ guidance document titled "Contents of a BEA Report." We are providing this BEA report to the MDEQ in accordance with Section 20126(1)(c)(i) of Part 201.

In the process of obtaining information for preparation of this BEA report, we followed procedures that represent current reasonable and accepted environmental practices and principles, in a manner consistent with the level of care and skill ordinarily exercised by members of this profession. The goal of this BEA was to evaluate if the Property was a facility as defined by Part 201; determination of the nature and extent of environmental contamination was not a goal of the BEA. The BEA is based on Phase II Environmental Site Assessments (ESAs) we conducted on August 31, 2005 and January 31, 2014. The laboratory results of the Phase II ESAs identified concentrations of arsenic, mercury, and selenium in soil were above Part 201 Generic Residential Cleanup Criteria. We cannot guarantee all potential contaminants have been identified. Undetected contamination resulting from historical activities or off-site sources may be present on the Property.

2. PROPERTY INFORMATION

The Property consists of 350 South Fifth Avenue in the City of Ann Arbor, Washtenaw County, Michigan. The Property consists of approximately 0.8 acres of land developed as a paved parking lot with small landscaped areas. The area north of the Property was comprised of a public bus transit center, the area east was the Ann Arbor District Library, the area south was primarily residential, and the area west was a 6-tiered parking structure. Figure 1 is a scaled area map showing the location of the Property and surrounding areas. Figure 2 is a scaled map showing existing Property features. The tax identification number for the parcel is 09-09-29-404-001. The survey and legal description of the Property are attached in Appendix A.

3. SUMMARY OF PHASE I ENVIRONMENTAL SITE ASSESSMENT

We conducted a Phase I Environmental Site Assessment (ESA), dated August 16, 2018 (Appendix B), of the Property. The Phase I ESA was conducted according to the ASTM International (ASTM) Practice E 1527-13, without exceptions or deletions.

Our review of readily available historical information as part of the Phase I ESA indicated that the Property was developed for residential use by 1888. A church was constructed on the southeastern portion of the Property by 1899. By 1916, the western residential portion of the Property was occupied by the City of Ann Arbor YWCA and a carriage house/garage building located near the northwest corner of the property was used as a furniture repair business. By 1960, the residential buildings, carriage house/garages, and church were demolished and the YMCA building was expanded and comprised the entirety of the Property. The YMCA building remained functional until 2005 when it was abandoned. The former YMCA building was demolished in 2008 and the Property was redeveloped as a surface parking lot. The Property has remained relatively unchanged since 2008. Our knowledge of suspected environmental impact on the Property was developed through completion of the Phase I ESAs, we identified the following RECs in connection with the Property:

- The documented presence of arsenic, mercury, and selenium in subsurface soils at concentrations greater than Part 201 Residential Cleanup Criteria.
- The potential for buried demolition debris and/or fill of unknown origin.

We identified two data failures in connection with this Phase I ESAs.

- No historical records for the years 1892 to 1899.
- The Property had been developed for residential purposes by the time of earliest available records, so we were not able to determine the first developed use.

The data failures did not impair our ability to identify or evaluate RECs because it is unlikely that the Property was developed with a use other than residential prior to 1888, and the Property was relatively unchanged from 1892 to 1899. We identified no limitations in connection with the Phase I ESA.

4. SUMMARY OF PHASE II ENVIRONMENTAL SITE ASSESSMENT

We conducted Phase II ESAs at the Property on August 25, 2005 and January 31, 2014. The previous assessments were documented in the following reports:

Baseline Environmental Assessment Report, 331 South Fourth Avenue and 350 South Fifth Avenue, Ann Arbor, Washtenaw County, Michigan, dated August 31, 2005.

Baseline Environmental Assessment Report, 350 South Fifth Avenue, Ann Arbor, Michigan, dated February 20, 2014.

Copies of the 2005 and 2014 BEA reports are on file with the MDEQ. The following paragraphs summarize the scope of the environmental assessments conducted by SME. The findings and results from these assessments are summarized in Section 5.

We conducted a BEA for the north-adjoining site and the Property on August 31, 2005 to evaluate RECs identified in our August 15, 2005 Phase I ESA. Assessment activities conducted included the advancement of eight soil borings and the submittal of 11 soil samples for laboratory analysis of volatile organic compounds (VOCs), polynuclear aromatic hydrocarbons (PAHs), and Michigan-10 metals (arsenic, barium, cadmium, chromium, copper, lead, mercury, selenium, silver, and zinc). Groundwater was not encountered during the assessment activities.

SME conducted a BEA for the Property on February 20, 2014 to evaluate RECs identified in Haengel & Associates Engineering, Inc. Phase I ESA, dated December 30, 2013. Assessment activities conducted on the Property include the advancement of nine soil borings and the submittal of 14 soil samples for laboratory analysis VOCs, PAHs, and Michigan-10 metal. Groundwater was not encountered in the soil borings during the assessment.

Summaries of our sampling plan, chemical analyses, and quality assurance/quality control (QA/QC) procedures are described in the following paragraphs. Copies of our detailed standard operating procedures will be provided upon request.

4.1 SAMPLE COLLECTION

Sampling locations and rationales, sample collection procedures, and field QA are discussed in the following sections.

4.1.1 SAMPLING LOCATIONS AND RATIONALES

We advanced 13 soil borings (SP1, SP2, SP7, SP8, SB1 through SB9) to further evaluate the RECs identified in the Phase I ESAs on the Property. The sampling locations are shown on Figure 3. The soil borings were advanced to a maximum depth of approximately 6 to 15.5 feet below ground surface (bgs). The soil borings were terminated due to advancement refusal associated with gravel and cobbles. We selected the sampling locations 1) based on the known historical uses of the Property and 2) to provide a basis for determining whether soil on the Property was contaminated as a result of historical uses or from migration of contaminants from offsite uses or operations. We selected soil samples for laboratory analysis based on field indicators of contamination, such as the presence of deleterious material in fill, elevated photoionization detector (PID) measurements, visible staining, or unusual odors. We did not measure elevated PID readings and did not observe staining or note unusual odors. We collected soil samples from SP1, SP7, and SP8 in fill material, because that is an area of the subsurface most likely, otherwise, to be contaminated. Soil boring SP2 was advanced to evaluate fill materials, and potential migration of contaminates from the north-adjoining property's historical automotive operations. Locations for soil borings SB2 through SB9 were selected to obtain general site coverage both inside and outside the former YMCA building footprint. Soil borings SB2, SB3, SB4, and SB9 were advanced outside the footprint of the former building footprint. Soil borings SB1 and SB8 were advanced adjacent to the footprint while SB5, SB6, and SB8 were advanced inside the footprint.

4.1.2 SAMPLE PROCEDURES

SME advanced soil borings on the Property using hydraulically driven, direct-push equipment mounted on an all-terrain vehicle (ATV). Each soil sample was collected using a 4-foot long, 2-inch outside-diameter, GeoProbe® MacroCore® Sampler fitted with a single-use, disposable, acetate liner. The soil in the sample core was visually evaluated, and representative samples were collected from each soil unit for visual classification in accordance with ASTM D2488, Standard Practice for Description and Identification of Soils (Visual-Manual Procedure). A portion of each soil sample was placed in a sealed plastic bag for field screening of ionizable volatile organic compounds (VOCs) using a calibrated photoionization detector (PID) equipped with a 10.6 eV lamp. Field screening consisted of allowing the sample bag to warm and release ionizable VOCs, then piercing the bag with the tip of the PID to read the total VOCs within the headspace of the bag. PID readings from the 2014 assessment were recorded on the soil boring logs (Appendix C). The collection depths of each soil sample are included in Table 1.

The amount of soil collected at each sampling location was dependent on chemical analyses requirements. First, soil samples intended for VOC laboratory analyses were removed from the boring liner and were placed directly in methanol-preserved 40-milliliter (mL) glass vials following United States Environmental Protection Agency (USEPA) Method 5035A. Soil volumes sufficient for analyses of additional parameters were then removed from the acetate liner and transferred to pre-cleaned, 8-ounce, glass jars provided by the analytical laboratory.

4.1.3 FIELD QUALITY ASSURANCE (QA) AND QUALITY CONTROL (QC)

SME team members wore a new pair of disposable nitrile sampling gloves during collection of each sample to minimize cross-contamination. Direct-push sampling equipment was decontaminated before each use with a high-pressure steam cleaner. We decontaminated soil sampling equipment before each use with a distilled water and laboratory-grade detergent solution wash followed by a distilled water rinse.

The analytical laboratory supplied the containers used for sample collection. The sample containers were pre-cleaned and contained the appropriate preservative. After sample collection, the containerized samples were kept cool, i.e., kept on ice or refrigerated, until delivery to the analytical laboratory. SME field staff followed chain-of-custody procedures to document the sample handling sequence.

4.2 CHEMICAL ANALYSES

We submitted four soil samples to Brighton Analytical of Brighton, Michigan and 14 soil samples to Fibertec Environmental Services (Fibertec) of Holt, Michigan, for chemical analyses of one or more of the following parameters: VOCs, PAHs, arsenic, barium, cadmium, total chromium, hexavalent chromium, copper, lead (total, fine, and course), mercury, selenium, silver, and zinc. The specific analytes for each sample are presented in Table 1. We selected the target analytes to be representative of, or indicator parameters for, the contaminants reasonably expected to be present in the environmental media based on the known historical uses of the Property. Brighton Analytical and Fibertec analyzed the samples using the reference methods listed below:

- VOCs USEPA Methods 5035A/8260B;
- PAHs USEPA Methods 3546/8270C;
- Mercury USEPA Method 7471B; and
- Other metals USEPA Methods 0200.2/6020A.

The laboratory analysis reports, complete list of specific analytical reference methods, reporting limits, and chain of custody documentation can be found in the 2005 and 2014 BEA reports; which are on file with the MDEQ.

5. KNOWN CONTAMINATION

We compiled and evaluated the cumulative results from the previous environmental assessments described in Section 4 to identify constituents present on the Property at concentrations greater than Part 201 generic residential cleanup criteria (Part 201 criteria). Our evaluation of the cumulative results from these assessments are presented in the following subsections. Additional information about site environmental conditions can be found in the SME's 2005 BEA report (200500648JK) and SME's 2014 BEA report (201401321JK) on file with the MDEQ.

5.1 SURFACE AND SUBSURFACE CONDITIONS

Descriptions of the soil conditions encountered at each of the 13 sampling locations are documented on the soil boring logs (Appendix C). Asphalt was encountered at the surface at SP1 to a depth of 3 inches. Concrete was encountered at the surface at SP2 to a depth of 8 inches. Topsoil was encountered at the surface at SP7 and SP8 to depths of 3 inches bgs. Porous asphalt and concrete pavement and associated pavement base was encountered at the surface at SP1, SP2, SB1 through SB9 to depths of 1.5 to 4 feet bgs. Below the asphalt and concrete surface materials at SP1, SP2, SB1 through SB9, fill was encountered. The fill generally consisted of sand, silt, gravel, and clay and included brick, and concrete, depending on location. Soil borings SB-1, SB4 through SB7 were intended as a shallow borings to assess shallow soils and were terminated at depths of 6 to 7 feet bgs in the fill. The fill was underlain by sand or silty sand to the maximum depths explored. SP1 and SP2 were terminated in the sand at 11.5 bgs. SP7 and SP8 were terminated in the silty sand at 4 feet bgs. SB2, SB8, and SB9 were terminated in the sand at depths of 14 to 15.5 feet bgs.

No odors, staining, or PID measurements greater than one part per million (ppm) were noted during field screening of the soil. Groundwater was not encountered during the advancement of the borings.

5.2 CHEMICAL ANALYSIS RESULTS

Results from the chemical analyses performed on soil samples collected during our assessments are summarized in the following paragraphs and tabulated in Table 1. We compared the results of chemical analyses of the soil samples to the Part 201 Generic Residential Cleanup Criteria (Part 201 criteria), dated December 30, 2013, GSI Protection Criteria Updated June 25, 2018 to determine if the Property is a "facility" as defined in Part 201. Laboratory analysis reports and chain of custody documentation can be found in the BEA reports.

Arsenic, mercury, and selenium were measured at concentrations greater than Part 201 criteria in one or more soil samples. No other analyzed constituents were measured in the soil samples at concentrations greater than Part 201 criteria. A summary of the constituents, chemical abstract numbers, measured concentrations, sample locations, and Part 201 criteria is provided in Table 1. Target analytes present at concentrations greater than the criteria are depicted on Figure 3.

5.3 DATA VERIFICATION/VALIDATION AND USABILITY

We evaluated the representativeness of the data collected during our subsurface assessment to determine if the data set was valid and of usable quality. Our discussion of quality control samples and our conclusions are summarized below. The laboratory QC results are detailed in the laboratory analytical reports included in the 2005 and 2014 BEA reports. The data set generated is of usable quality and meets the Property-specific objectives.

6. FACILITY STATUS

The results of our Phase II ESAs demonstrate that the Property is a "facility" as defined by Part 201 because arsenic, mercury, and selenium was measured in multiple soil samples at concentrations above Part 201 Generic Residential Cleanup Criteria. A summary of the CAS numbers, constituents, measured concentrations, sample locations, and Part 201 criteria exceeded is provided on Table 1. Target constituents present at concentrations greater than Part 201 criteria are depicted on Figure 3.

7. IDENTIFICATION OF AUTHOR OF THE BEA

This Baseline Environmental Assessment (BEA) report was prepared by Mr. Troy D. Helmick, CPG, the Environmental Professional, and reviewed by Ms. Cheryl Kehres-Dietrich, CGWP. Resumes of Mr. Helmick, and Ms. Kehres-Dietrich are attached in Appendix F. Contact information for Ms. Kehres-Dietrich is provided below:

Cheryl Kehres-Dietrich, CGWP Principal/Vice President SME 43980 Plymouth Oaks Boulevard Plymouth, Michigan 48170 Phone: (734) 454-9900 Email: cheryl.kehres-dietrich@sme-usa.com

1. Concentrations reported in micrograms per kilogram (µg/kg).

 Analytical results were compared to December 30, 2013; GSI Protection Criteria Updated June 25, 2018; Promulgated Cleanup Criteria, R 299.46, Table 2. Soil: Residential Part 201 Generic Cleanup Criteria and Screening Levels.

3. Results exceeding one or more criteria are shaded, as are the criteria exceeded.

4. VOCs - Volatile Organic Compounds. SVOCs - Semivolatile Organic Compounds. Refer to the analytical report for the full list of VOC

and SVOC analytes

5. CS - Criterion is specific to individual constituent.

6. <RL - Analytical result was below laboratory reporting limit(s).

7. ID - Insufficient data to develop criteria.

8. NA - Not applicable.

9. NE - Not evaluated.

10. NLL - Not likely to leach.

11. * = GSI Protection was calculated for the indicated metals using the MDEQ spreadsheet for calculating GSI. A default water hardness value of 150 mg/kg as CaCO3 was used to calculate GSI. Results are presented for surface water recieveiving bodies not protected as a drinking water soruce.

12. Italicized - the respective criterion was below the Statewide Default Background Level (SDBL) and therefore the value defaulted to the SBDL value.

** - Total chromium results compared to the more restrictive hexavalent chromium criteria because chromium was not speciated.
 Concentrations were also compared to, and found to be below, the ambient and indoor air criteria and the soil saturation concentration

screening levels.

Mr. Matthew P. Thomas City of Ann Arbor 301 East Huron Street Ann Arbor, Michigan, 48107

RE: Phase I Environmental Site Assessment Report 350 South Fifth Avenue, Ann Arbor Michigan SME Project No.: 079771.00

Dear Mr. Thomas:

We have completed a Phase I Environmental Site Assessment (ESA) of the above-referenced property, hereinafter referred to as the Property. The enclosed Phase I ESA report presents our interpretation of site conditions at the time the Phase I ESA was completed, based on field observations, a review of readily available historical and regulatory records, and interviews.

The Phase I ESA was requested to identify recorded and readily observable recognized environmental conditions associated with the Property. We understand the City of Ann Arbor will rely upon the professional opinions and representations contained in the report in accordance with the terms and conditions agreed upon for the project. This reliance is not to be construed as a warranty or guarantee on the part of SME.

If you have any questions concerning this report, or if additional services are required, please contact us.

Sincerely,

SME

& U Leff

Anita H. Ketola, CHMM Project Consultant

1. SUMMARY

SME's project team conducted a Phase I Environmental Site Assessment (ESA) of 350 South Fifth Avenue, in Ann Arbor, Washtenaw County, Michigan, hereinafter referred to as "the Property," in conformance with the scope and limitations of ASTM International (ASTM) Standard Practice E 1527-13 (Practice). Any exceptions to, or deletions from, this practice are described in Section 2.4 of this report. The general Property location is shown on Figure 1. Property features are shown on Figure 2.

The purpose of this Phase I ESA was to satisfy relevant ASTM E 1527-13 requirements for the User of this report as part of reacquisition of the Property. One of the primary objectives was to identify recognized environmental conditions (RECs) in connection with the Property and assess their relative significance.

This Phase I ESA report is comprised of the following elements: 1) property description, 2) User-provided information, 3) records review, 4) site reconnaissance, 5) interviews, 6) findings, opinions, and conclusions.

FINDINGS

The Property was developed for residential use by 1888. A church was constructed on the southeastern portion of the Property by 1899. By 1916, the western residential portion of the Property was occupied by the City of Ann Arbor YWCA and a carriage house/garage building located near the northwest corner of the property was used as a furniture repair business. By 1960, the residential buildings, carriage house/garages, and church were demolished and the YMCA building was expanded and comprised the entirety of the Property. The YMCA building remained functional until 2005 when it was abandoned. The former YMCA building was demolished in 2008 and the Property was redeveloped as a surface parking lot. The Property has remained relatively unchanged since 2008.

CONCLUSIONS

This assessment has revealed no evidence of recognized environmental conditions in connection with the Property except for the following:

The following recognized environmental conditions and/or controlled recognized environmental conditions were identified at the Property.

- The documented presence of arsenic, mercury, and selenium in subsurface soils at concentrations greater than Part 201 Residential Cleanup Criteria is considered a REC in connection with the Property (Section 4.1, 4.2.4).
- The potential for buried demolition debris and/or fill of unknown origin to be present on the Property is considered a REC (Section 4.4.2).

We identified two data failures in connection with this Phase I ESA.

A data failure was identified for the years 1892 to 1899; however, the use of the Property was relatively unchanged during that time, with the exception of the southeast corner of the Property that changed from residential to church use. The data failure did not impair our ability to identify RECs; accordingly, this is not considered a significant data gap.

The Property had been developed for residential purposes by the time of the earliest available records, so we were not able to determine the first developed use. This is data failure for this Phase I ESA. It is unlikely that the Property was developed with a use other than residential prior to 1888; accordingly, this is not considered a significant data gap.

We identified no limiting conditions in connection with this Phase I ESA.

The findings, opinions and conclusions presented above are intended to provide a summary of the pertinent findings of our Phase I ESA investigation. It should be noted that although this section is an integral part of the report, it should not be substituted in lieu of reading the entire report. The entire report must be read in order to fully understand the potential environmental concerns associated with the Property.

SME's Project Team was as follows:

Preparer: Environmental Professional (EP): Senior Technical Reviewer: Anita H. Ketola, CHMM Troy D. Helmick, CPG Cheryl A. Kehres-Dietrich, CGWP

2. INTRODUCTION

SME's project team conducted a Phase I ESA of the Property at 350 South Fifth Avenue, Ann Arbor, Washtenaw County, Michigan (Figure 1). The Phase I ESA was conducted according to the ASTM International (ASTM) Practice E 1527-13 (Practice), which is accepted in the U.S. Environmental Protection Agency regulations as satisfying one component of the requirements of AAI under CERCLA.

At the time of the reconnaissance, the Property consisted of 0.8 acres of land developed as a paved parking lot with small landscaped areas. The area north of the Property was comprise of a public bus transit center, the area east was the Ann Arbor District Library, the area south was primarily residential, and the area west was a 6-tiered parking structure. The following utilities are available in the area of the Property: DTE Electric for electrical service and DTE Gas for natural gas service. Municipal water and sanitary services are available in the Property area. Storm water passes through the porous pavement of the parking lot. A current Property Features Diagram (Figure 2) was developed from the observations, field notes, photographs (Appendix A), and/or historical information collected during conduct of this Phase I ESA.

The Property's tax parcel identification number is 09-09-29-404-001, and the legal description is provided on the ALTA survey, which is attached in Appendix B. The property summary sheet, which includes the City's abbreviated legal description, is attached in Appendix B. The Property owner is listed as Fifth Fourth, LLC, but the City of Ann Arbor reacquired the Property on July 3, 2018.

Mr. Matthew P. Thomas, on behalf of the City of Ann Arbor (the User), authorized the conduct of this Phase I ESA to identify and evaluate potential environmental concerns associated with reacquisition of the Property. We were retained to conduct this Phase I ESA in accordance with our July, 31 2018 proposal number P02522.18.

2.1 PURPOSE

The purpose of this Phase I ESA was to satisfy relevant ASTM E 1527-13 requirements for the User of this report as part of reacquisition of the Property. One of the primary objectives was to identify RECs in connection with the Property and assess the relative significance of the identified REC(s). The Practice defines a REC as:

...the presence or likely presence of any hazardous substances¹ or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.

2.2 DETAILED SCOPE OF SERVICES

This Phase I ESA was conducted in conformance with the ASTM International Standard Practice on Environmental Site Assessments for Commercial Real Estate designation E 1527-13, "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process." This Phase I ESA does not address the non-scope considerations as defined by Section 13 of the Practice.

¹ For the purposes of this Phase I ESA, a hazardous substance is a substance as defined in the ASTM Practice E 1527-13.

2.3 SIGNIFICANT ASSUMPTIONS

Pursuant to the Practice, we assume information provided by all sources and parties (including the User), is accurate and complete except where obvious inconsistencies or inaccuracies were identified.

2.4 LIMITING CONDITIONS AND EXCEPTIONS

No limiting conditions were encountered during site reconnaissance activities. The Practice's scope of assessment was implemented without exceptions.

2.5 SPECIAL TERMS AND CONDITIONS

No special terms or conditions were imposed on the conduct of this Phase I ESA.

2.6 RELIANCE

We have prepared this report to be used and relied upon solely and exclusively by the City of Ann Arbor (the User), in accordance with terms and conditions agreed upon for the project. No other party may rely upon our opinions, conclusions or reports unless SME has agreed to such reliance in writing.

According to ASTM E 1527-13, the following components of a Phase I ESA must be conducted within 180 days of the date of acquisition or the date of an intended transaction:

- interview(s) with owners, operators, and occupants
- search for recorded environmental cleanup liens
- review of federal, tribal, state and local government records
- visual inspections of the Property and adjoining sites
- declaration by the environmental professional responsible for the assessment

Review of federal, tribal, state, and local government records was completed on August 14, 2018, the earliest completion date of the required Phase I ESA components. This Phase I ESA report, therefore, is valid until February 10, 2019.

3. USER-PROVIDED INFORMATION

As part of the ASTM Practice, the User has the responsibility to provide information described in the subsections below. Mr. Thomas, the User's representative, provided information about the following issues through completion of the **User Questionnaire** in Appendix C.

3.1 REASON FOR THE PHASE I ESA

The User reported the reason for this Phase I ESA was to evaluate the environmental conditions of the Property prior to purchase of the Property. However, in subsequent discussions the User representative reported the reason for this Phase I ESA was to evaluate the environmental conditions during reacquisition of the Property.

3.2 RECORDED ENVIRONMENTAL CLEANUP LIENS AND ACTIVITY AND USE LIMITATIONS (AULs)

The User's representative reported that Liberty Title was retained to review recorded land title records on file with the Register of Deeds for Washtenaw County, Michigan, for the purpose of identifying recorded environmental cleanup liens and AULs related to the Property. No recorded environmental cleanup liens or AULs related to the Property were reported by the User. The User reported two recorded easements for DTE and one recorded right-of-way easement for DTE.

As part of the regulatory review required as part of this assessment, federal institutional controls/engineering control registries, and state and tribal institutional control/engineering control registries were researched for information related to possible liens against the Property. No liens were found for the Property as a part of this search.

3.3 SPECIALIZED KNOWLEDGE AND EXPERIENCE

The User's representative reported having no specialized knowledge or experience that would indicate, or create suspicion of, the presence of environmental contamination on the Property.

The User reported the City of Ann Arbor owned the Property in the early 2000's when it was being used as a YMCA. The City demolished the former YMCA building and the Property was redeveloped as a parking lot. The Property was sold to a developer in 2014 and the use as a surface parking lot ended.

3.4 RELATIONSHIP OF PURCHASE PRICE TO VALUE

The User's representative reported that the purchase price of the Property may not reflect fair market value. The User clarified the Property was repurchased by the City by virtue of a bargained-for reversionary price from the former owner. The City has the option to purchase the Property at the reversionary price or the Fair Market Value, whichever is less.

3.5 COMMONLY KNOWN OR REASONABLY ASCERTAINABLE INFORMATION

The User's representative reported that he has not become aware of any commonly known or reasonably ascertainable information that would indicate the Property could be contaminated or that any past event could have resulted in environmental impact of the Property or adjoining sites.

3.6 PROCEEDINGS INVOLVING THE PROPERTY

The User's representative, based on personal knowledge and experience related to the Property, reported no known pending, threatened, or past litigation, administrative proceedings, or violations of environmental laws and regulations related to hazardous substances or petroleum products in, on, or arising from the Property.

4. RECORDS REVIEW

4.1 ENVIRONMENTAL RECORD SOURCES

We retained Environmental Data Resources, Inc. (EDR) to query the state, federal, and tribal regulatory agency databases described in the Practice to identify regulated and/or environmentally impacted sites within the specified approximate minimum search distances. EDR also queried other readily available regulatory agency databases. The queried databases, associated search radii, and dates the lists were updated are listed in the EDR report (Appendix D). The EDR report also includes maps indicating the locations of these listed sites relative to the Property. Unmapped sites, as identified by EDR, are sites that for various reasons cannot be mapped through the EDR query system. Where possible, we attempted to locate the reported unmapped sites.

A summary of listed sites of concern is presented in the table included in this subsection. The other listed sites do not appear to represent RECs in connection with the Property, because distance and anticipated groundwater flow direction limits the migration onto the Property from these sites.

SITE NAME AND ADDRESS	APPROXIMATE DISTANCE AND DIRECTION FROM PROPERTY ¹	NAME OF LIST ²
350 South Fifth Avenue	Property	MI INVENTORY (2), FINDS, ECHO, MI WDS, RCRA NonGen / NLR
331 South Fourth Avenue and 350 South Fourth Avenue	Property and north-adjoining site	MI INVENTORY, MI BEA
314 South Fourth Avenue	300 feet to the north-northwest	MI INVENTORY (3)
Oil Resort LLC, Bureau of ATF 200 East Liberty Street	225 feet north	RCRA NonGen / NLR, FINDS (2), ECHO (2), RCRA-CESQG

¹EDR sites are mapped by address. Distances and/or site directions listed above may be adjusted from those reported by EDR to better represent field conditions and potential site boundaries.

²Definitions of acronyms and lists are presented in the EDR report.

A summary of our findings is presented in the following paragraphs.

350 South Fifth Avenue

The Property was listed in the Michigan Inventory (MI INVENTORY) databases due to the disclosure of BEAs in 2005 and 2014, and the historical handling of hazardous waste under waste code D001 (ignitable hazardous waste). No violations were reported associated with the Property's hazardous waste handling. The site was listed in the MI Waste Data System (WDS) for the disposal of waste. The Property's Facility Index System (FINDS) and Enforcement Compliance History Online (ECHO) database listing records the prior hazardous waste handling status.

SME conducted the 2014 BEA for the Property. Assessment activities conducted on the Property include the advancement of nine soil borings and the submittal of 14 soil samples for laboratory analysis. Groundwater was not encountered in the soil borings during the assessment. We reviewed the 2014 BEA laboratory results and compared the results to the most recent Part 201 Residential Generic Cleanup Criteria (Part 201 Cleanup Criteria). Laboratory analytical results indicate that arsenic, mercury, and selenium were present at concentrations greater than Part 201 Cleanup Criteria. Concentrations of volatile organic compounds (VOCs) were reported below the laboratory method detection limits. Concentrations of polynuclear aromatic hydrocarbons (PAHs) were reported above the laboratory method detection limit, but below the applicable Part 201 Cleanup Criteria. The documented presence of arsenic, mercury, and selenium in subsurface soils is considered a REC in connection with the Property.

331 South Fourth Avenue and 350 South Fifth Avenue

The north-adjoining site and Property were listed in the EDR Radius Map report due to the disclosure of a BEA report in 2005.

SME conducted the 2005 BEA for the north-adjoining site and the Property. Assessment activities conducted included the advancement of eight soil borings and the submittal of 11 soil samples for laboratory analysis. Groundwater was not encountered during the assessment activities. We reviewed the laboratory results and compared the results to the most recent Part 201 Criteria. Laboratory analytical results of soil samples collected on the north-adjoining site indicated arsenic, mercury, selenium, benzo(a)pyrene, benzo(b)fluoranthene, and trichloroethene were present at concentrations exceeding the applicable Part 201 Cleanup Criteria. Laboratory analytical results for soil samples collected on the Property indicate that arsenic, mercury, and selenium were present at concentrations greater than Part 201 Cleanup Criteria. Concentrations of VOCs and PAHs were reported above the laboratory method detection limit, but below the applicable Part 201 Cleanup Criteria. The documented presence of arsenic, mercury, and selenium in subsurface soils is considered a REC in connection with the Property.

314 South Fourth Avenue

The site was listed in the EDR Radius Map report due to the disclosure of two BEA reports. The submittal of the BEAs indicate hazardous or petroleum constituents were measured at the site above the Part 201 Cleanup Criteria during site transactions. At the time of publication of this report, a copy of the BEAs were not received from the MDEQ. The distance of the site from the Property is approximately 300 feet to the north-northwest. The presence of constituents at the site does not represent a REC in connection with the Property because the estimated groundwater flow to the west limits the potential for the migration of impact from the site to the Property.

Oil Resort LLC, Bureau of ATF

The site was listed in the EDR Radius Map report as a RCRA NonGen / NLR, RCRA-CESQG, FINDS, and ECHO databases due to the historical generation and handling of hazardous waste under waste code D001. No violations were reported for the site for their historical generation or handling of hazardous waste. Based on the lack of reported violations or releases at the site, the site's historical generation or handling of hazardous waste is not considered a REC in connection with the Property.

4.2 ADDITIONAL ENVIRONMENTAL RECORD SOURCES

4.2.1 COUNTY ENVIRONMENTAL HEALTH DEPARTMENT

On August 13 and 15, 2018, we contacted the Washtenaw County Environmental Health Department via e-mail transmission and telephone and requested all available information pertaining to environmental complaints, concerns, or general records associated with the Property and surrounding area including information on septic systems and water wells, if any, located on the Property. On August 20, 2018, Ms. Tanganika Hargrove informed us that there were no records pertaining to information we requested on the Property.

4.2.2 LOCAL FIRE DEPARTMENT

On August 13, 2018, we contacted the Ann Arbor Fire Department via telephone and e-mail transmission and requested all available records associated with the Property and surrounding area regarding underground storage tanks, hazardous materials responses or other environmental complaints or concerns. The following written records were provided for review by the Ann Arbor City Clerk. The Ann Arbor Fire Prevention Bureau periodically conducted construction inspection and released notices to the Property, formerly the YM-YWCA, between 1971 and 2005. The notices included inspections of sprinkler systems, electrical wiring conditions, and fire extinguisher inspections. The provided information does not indicate a REC.

4.2.3 STATE AGENCY FOR OIL AND GAS WELLS

We reviewed the Physical Setting Source Map in the EDR report for oil and gas wells on the Property and adjoining area. No oil or gas wells were observed within a one-mile radius of the Property.

4.2.4 OTHER RECORD SOURCES

As discussed in section 4.1 we reviewed SME's BEA completed for the Property, 350 South Fifth Avenue, Ann Arbor, Michigan, dated February 20, 2014, and SME's BEA completed for 331 South Fourth Avenue and 350 South Fifth Avenue, Ann Arbor, Michigan, dated August 31, 2005. No other record sources were accessed as part of this Phase I ESA.

4.3 PHYSICAL SETTING SOURCE(S)

4.3.1 USGS - CURRENT 7.5 MINUTE TOPOGRAPHIC MAP

We reviewed a United States Geological Survey (USGS) 7.5-minute series Topographic Map Ann Arbor East Quadrangle, Michigan, compiled in 2014 depicted on Figure 1. The Property was relatively flat at an elevation of approximately 850 feet above mean sea level (MSL). It was in a downtown as shown in Figure 1. The Huron River flows through Ann Arbor and is located approximately 0.72 miles northeast of the Property. Based on the review of the topographic map, groundwater flow is estimated to initially flow west prior to flowing northeast towards the Huron River.

4.3.2 OTHER NON-PRACTICE PHYSICAL SETTING SOURCES

We queried the United States Department of Agriculture Web Soil Survey for information regarding the soils located at the Property. Soils at the Property consist of Fox sandy loam, till plain (2 to 6% slope). Soil summaries obtained from the Web Soil Survey are included in Appendix D.

SME conducted a geotechnical investigation of the Property for the City of Ann Arbor in December 2005. The general soil profile encountered beneath pavements or topsoil consisted of sand fill, underlain by medium dense to extremely dense natural sands with interbedded layers of gravel and cobbles extending approximately 50 feet bgs. Groundwater was encountered at approximately 45 feet bgs.

4.4 HISTORICAL USE INFORMATION FOR THE PROPERTY

We consulted historical record sources described in the following subsections to develop a history of the Property's previous uses to help identify the likelihood of past uses having led to RECs in connection with the Property. The information reviewed was from reasonably ascertainable standard sources, defined in the Practice as publicly available, obtainable from its source within reasonable time and cost constraints, and practicably reviewable.

Data failures encountered, as defined by the Practice, are described in the following discussions of the respective historical sources. The Practice requires review of only as many of the standard historical sources as are reasonably ascertainable and likely to be useful.

4.4.1 STANDARD HISTORICAL SOURCES

The sources reviewed for this Phase I ESA are summarized below. Copies of source documents are included in Appendix B. A summary of findings from these reviews is presented in Section 4.4.2.

• Aerial Photographs: We reviewed aerial photographs, obtained from EDR, dated 1937, 1940, 1949, 1955, 1962, 1969, 1973, 1978, 1983, 1987, 1992, 1993, 2006, 2009, 2012, and 2016. In addition we reviewed the online Map Washtenaw program with the Washtenaw County

Geographic Information System. We reviewed aerial photographs from 1947, 1960, 1966, 1979, 1984, 1997, 2008, 2009, and 2018.

- Fire Insurance Maps: We reviewed Sanborn® Fire Insurance Maps of the Property area, obtained from EDR, dated 1888, 1892, 1899, 1908, 1916, 1925, 1931, 1948, and 1972.
- **Property Tax Files:** We visited the Washtenaw County GIS website and reviewed available records, which were comprised of ownership information, parcel number, property tax information, and assessed value.
- **Recorded Land Title Records:** We did not review land title records because information regarding the history of the Property was obtained from other historical sources identified herein. In addition, land title records typically provide information regarding ownership, but not use, of a property.
- USGS Topographic Maps: We reviewed the USGS 7.5 minute series Topographic Map for the Ann Arbor East Quadrangle, Michigan compiled in 1965, 1973, 1975, 1978, 1983, and 2014. We also reviewed the USGS 15 minute series Topographic Map for the South Lyon Quadrangle compiled in 1902, and 1906 and the 30 minute series Topographic Map for the Ann Arbor Quadrangle compiled in 1904, and 1908 and the USGS
- Local Street Directories: We reviewed City Directory Abstracts provided by EDR, for the years 1912, 1917, 1922, 1927, 1932, 1937, 1942, 1947, 1951, 1955, 1960, 1964, 1969, 1974, 1979, 1984, 1988, 1992,1995, 2000, 2005, 2010, and 2014. Our review of fire insurance maps identified the following additional historical addresses associated with the Property
 - o Circa 1890's: 45 South Fourth Avenue and 32-34 South Fifth Avenue
 - Circa 1910's: 343 South Fourth Avenue, 215 East William Street, 34 South Fifth Avenue, and 338 South Fifth Avenue
 - Circa 1916's: 343 South Fourth Avenue, 215 East William Street, 223 East William Street, and 338 South Fifth Avenue
 - Circa 1920's-1950's: 343 South Fourth Avenue, 215 East William Street, 223 East William Street, and 342-336 South Fifth Avenue
 - o Circa 1970's: 223 East William Street and 342 South Fifth Avenue
- **Building Department Records:** We contacted Ms. Jennifer Alexa, the Ann Arbor Deputy City Clerk for Ann Arbor building records. The only building records available were Fire Department safety inspections. Refer to Section 4.2.2, for additional information.
- **Zoning/Land Use Records:** We reviewed Ann Arbor's zoning map. According to the Planning and Development Services Department the Property is located in the 0929 SE sector of Ann Arbor. The Property is zoned for commercial use.
- Other Historical Sources: We reviewed SME's BEA, dated February 20, 2014, completed for the Property. We reviewed the EDR Radius Map Report for listing of historical automobile service stations and/or historical dry cleaners on or in the area of the Property.

4.4.2 HISTORICAL USE SUMMARY

A summary of historical usage of the Property, back to 1888, the date of earliest readily available records as described above, is presented in the following table:

YEAR/PERIOD	IDENTIFIED / INFERRED USE	SOURCE (Date)	
1888 - 1892	The Property was comprised of three residential parcels with associated carriage houses/garages with the following addresses: 45 South Fourth Avenue, and 32 and 34 South Fifth Avenue.	Sanborn® Maps (1888, 1892)	

YEAR/PERIOD	IDENTIFIED / INFERRED USE	SOURCE (Date)
1899 - 1912	By 1899, the southeastern residence was demolished and the Trinity Evangelical Lutheran Church (34 South Fifth Avenue) and a residence (215 East William Street) was constructed on the southeast portion of the Property. By 1908, 45 South Fourth Avenue was readdressed as 343 South Fourth Avenue, 32 South Fifth Avenue was readdressed as 348 South Fifth Avenue, and the church was readdressed as 223 East William Street.	Sanborn® Maps (1899, 1908) City Directories (1912)
1916 - 1922	By 1916, the Property was split into four separate parcels. The western residential parcel was now labeled as the City YWCA and the formerly observed carriage house/garage near the northern Property boundary was labeled as a furniture repair business. The remaining parcels appeared relatively unchanged.	Sanborn® Map (1916) City Directories (1917, 1922)
1925 - 1955	By 1925, An additional residence was constructed on the northeast corner of the Property under the address 336 South Fifth Avenue. The remaining parcels appeared relatively unchanged.	Sanborn® Maps (1925 - 1948) Aerial Photographs (1937 - 1955) City Directories (1927 - 1955)
1960 - 2006	By 1960, the residential buildings, carriage house/garages, and church were demolished and the YMCA was expanded and comprised the entirety of the Property. By 1964, the Property was readdressed to 350 S. Fifth Avenue. The building remained functional until 2005 when the YMCA was abandoned.	Aerial Photographs (1960 - 2006) Sanborn® Map (1972) City Directories (1960 - 2005) Property Tax Files (2005)
2008 - Present	The former YMCA building was demolished in 2008 and the Property was redeveloped as a surface parking lot. The Property's currently remains an unused parking lot.	Aerial Photographs (2008 - 2016)

The Property had been developed for residential purposes by the time of the earliest available records, so we were not able to determine the first developed use. This is data failure for this Phase I ESA. It is unlikely that the Property was developed with a use other than residential prior to 1888; accordingly, this is not considered a significant data gap.

A data failure was identified for the years 1892 to 1899, however the use of the Property was relatively unchanged during that time, with the exception of the southeast corner of the Property which changed from residential to church use. The data failure did not impair our ability to identify RECs; accordingly, this is not considered a significant data gap.

Between 1908 and 1916 a furniture repair shop was established on the northwest portion of the Property in a carriage house/garage building. Sometime during 1916 to 1925, the furniture repair shop was converted to a garage. This is not considered a REC because on August 25, 2005 and January 14, 2014, SME conducted soil borings near the approximate location of the furniture repair shop. Laboratory analysis only identified an exceedance of arsenic, mercury, and selenium in soil that exceeded applicable Part 201 Cleanup Criteria and not the VOCs and PAHs constituents typically associated with furniture repair and refinishing.

It is common in Michigan for the historical filling of basements with the demolition debris and/or with fill from an unknown origin containing contaminants. The potential for buried demolition debris and/or fill of unknown origin to be present on the parcels is considered a REC.

4.4.3 HISTORICAL USE INFORMATION ABOUT SURROUNDING AREAS

An attempt was made to assess the historical uses of specific proximate sites by reviewing records referenced in Section 4.4. A summary of proximate sites of concern, as identified only to the extent that this information was revealed the course of researching the Property itself, is presented in the table below:

YEAR/PERIOD	SOURCE (Date)	
1916 - 1951	Garage (1916, 1925, 1931, 1948) Overland Garage Co (1917) Woodbury & Seyler Garage (1922) Packard Sales & Service and Benj P Woodbury Garage (1927) Ann Arbor Buick Service Co. used car dept. (1932) Motor Service Garage (1937) Railway Express Agency (1942-1947) Manausa Mtr Sls Inc. Filling Station (1951) Jim's Gulf Service gas station and car wash (1955)	Sanborn® Maps (1916 - 1948) City Directories (1917 - 1955)
331-3	335 South Fourth Avenue & 331-335 South Fifth Avenue (north-	adjoining site)
1927 - 2010	Benj P Woodbury Auto Parking (1927) Johnson Sales & Service autos (1942 - 1947) Benz Motors Inc. (1951-1955) Oversees Auto Sales (1960) Oversees Imported Cars (1964) European Motor Service (1969) Trans Authority Way Station (1979) Ann Arbor Transit Authority Center (1984 - 2005) Blake Transit Center (2010) Auto sales service (1948 - 1972)	City Directories (1927 - 2010) Sanborn® Maps (1948, 1972)
332 South Fifth Avenue (north-adjoining site)		
1948 - 1972	Auto painting shop and cement brick/concrete block construction	Sanborn® Maps (1948, 1972)

The north and west adjoining sites were historically used for auto repair, painting, sales, and as a filling station. These uses typically include the use of petroleum products, solvents, and hazardous materials. This is not considered a REC in connection with the Property because on August 25, 2005 and January 14, 2014, SME conducted soil borings adjacent to the western and northern property boundaries. Laboratory analysis identified only arsenic, mercury, and selenium in soil exceeded applicable Part 201 Cleanup Criteria and not the VOCs or PAHs constituents typically associated with these historical uses.

5. SITE RECONNAISSANCE

We conducted a site reconnaissance to identify evidence indicative of RECs in connection with the Property. Descriptions of the current Property use and conditions, including the use, storage, and/or treatment of hazardous substances and/or petroleum products and the generation, storage/accumulation, and/or disposal of chemical, petroleum or other contaminated wastes are presented in the following sections.

5.1 METHODOLOGY AND LIMITING CONDITIONS

On August 14, 2018, Ms. Courtney Kosters, under the guidance of the EP, conducted a reconnaissance to observe Property conditions and features. Photographs taken during the reconnaissance, which illustrate observed conditions and surrounding areas, are contained in Appendix A. No limiting conditions were encountered.

5.2 GENERAL PROPERTY SETTING

The Property is situated in a relatively flat portion of downtown Ann Arbor. The Property is located along East William Street between South Fourth and South Fifth Street. The Property is an asphalt-paved parking lot with landscaping at the perimeter. Residential developments were located to the south, commercial land uses were located to the north and east, and a parking structure was located to the west.

5.3 EXTERIOR OBSERVATIONS

The Property is covered primarily with porous pavement and concrete sidewalk. On the south side of the Property are remnants of a parking toll kiosk and parking lot gate barrier. Ms. Kosters observed no evidence of stained soils or pavements, or areas of stressed vegetation, septic systems or water supply wells. No RECs were identified unless indicated in the following subsections.

5.3.1 CHEMICAL USE AND STORAGE

Ms. Koster observed no use and/or storage of chemicals.

5.3.2 USTs/ASTs

Ms. Kosters observed no evidence of USTs or ASTs.

5.3.3 PCB-CONTAINING EQUIPMENT

Ms. Kosters observed three pad-mounted transformers in good condition on the north side of the property. There was no evidence of releases or staining on the concrete pads surrounding the transformers.

5.3.4 PITS, PONDS, AND LAGOONS

Ms. Kosters observed no evidence of pits, ponds, or lagoons.

5.3.5 WASTE GENERATION, TREATMENT, STORAGE, AND DISPOSAL

Ms. Kosters observed no evidence of the generation, treatment, storage, or disposal of liquid or solid wastes.

5.3.6 OTHER EXTERIOR FEATURES

Ms. Kosters observed no other exterior features.

5.4 INTERIOR OBSERVATIONS

The Property consists of a vacant parking lot and no buildings were observed.

5.5 ADJOINING SITES OBSERVATIONS

Known current uses of adjoining sites are summarized in the following table:

DIRECTION	DIRECTION NAME ACTIVITY	
		Public transportation center and bus depot
East	Ann Arbor District Library 343 South Fifth Avenue	Public building
South	Muehlig Funeral Chapel 403 South Fourth Avenue	Private funeral home
	Residential parcels 212-222 East Williams Street	Residential
West 115 East William Street Parking structure		Parking structure

Adjoining sites were observed from the Property and from the adjoining side-walks. No RECs were identified based on the adjoining sites' current use.

6. INTERVIEWS

As part of the conduct of this Phase I ESA, Ms. Kosters interviewed the following pertinent individuals:

- Current Property owner (or representative) Mr. Matthew Thomas, Assistant City Attorney
- State and/or local government officials Ms. Jennifer Alexa, Ann Arbor Deputy City Clerk

6.1 INTERVIEWS WITH OWNER/SITE MANAGER/OCCUPANT

We evaluated information provided on the Owner/Occupant Questionnaire. A copy of our Owner/Occupant Questionnaire completed by Mr. Matthew Thomas is included in Appendix C.

Mr. Matthew Thomas reported he has been familiar with the Property from 2003-2014, and July 2018 through the present. Mr. Thomas was aware the site was redeveloped as a surface parking lot following the demolition of the former YMCA building in 2008. Mr. Thomas stated the site has been a vacated parking lot from 2014 to the present. Mr. Thomas was aware of utility easements present at the Property. Mr. Thomas was unaware of any potential environmental concerns associated with the Property with the exception of the known completion of a BEA completed by SME in 2014, and the completion of a Phase I ESA and geotechnical study by SME in 2005. A review of the Owner/Occupant Questionnaire identified no additional RECs in connection with the Property.

6.2 INTERVIEWS WITH LOCAL GOVERNMENT OFFICIALS

We interviewed Ms. Jennifer Alexa, Ann Arbor Deputy City Clerk, and asked whether she knew of any environmental incidents or concerns associated with the Property and surrounding area. Jennifer requested that we formally submit a Freedom of Information (FOIA) request. Information was provided via e-mail, results are described in Section 4.2.2.

6.3 INTERVIEWS WITH OTHERS

No other interviews were performed as part of this Phase I ESA.

7. VAPOR ENCROACHMENT FROM THE SUBSURFACE

Vapors can encroach onto the Property and migrate into current or future Property structures as the result of a release of hazardous substances or petroleum products to the subsurface soil or groundwater at the Property or from releases to proximate sites located adjacent, hydraulically upgradient, or with preferential pathways to the Property. We considered the following factors when assessing the likelihood of vapor encroachment at the Property. Please note, this assessment does not constitute a vapor encroachment screening as defined in ASTM E2600-10.

- Current use of the Property and proximate sites via visual reconnaissance (Section 5.0)
- Historic use of the Property and proximate sites via review of a regulatory database report (Section 4.1) and historical sources (Section 4.4)
- Physical setting of the Property and proximate sites (Section 4.3)

Based on the evaluation of the above referenced, criteria potential subsurface vapor encroachment sources were not identified.

8. EVALUATION

The findings, opinions and conclusions presented above are intended to provide a summary of the pertinent findings of our Phase I ESA investigation. It should be noted that although this section is an integral part of the report, it should not be substituted in lieu of reading the entire report. The entire report must be read in order to fully understand the potential environmental concerns associated with the Property.

8.1 FINDINGS AND OPINIONS

The Property was developed for residential use by 1888. A church was constructed on the southeastern portion of the Property by 1899. By 1916, the western residential portion of the Property was occupied by the City of Ann Arbor YWCA and a carriage house/garage building located near the northwest corner of the property was used as a furniture repair business. By 1960, the residential buildings, carriage house/garages, and church were demolished and the YMCA building was expanded and comprised the entirety of the Property. The YMCA building remained functional until 2005 when it was abandoned. The former YMCA building was demolished in 2008 and the Property was redeveloped as a surface parking lot. The Property has remained relatively unchanged since 2008.

The following recognized environmental conditions and/or controlled recognized environmental conditions were identified at the Property.

- Subsurface assessment activities were completed at the Property in 2005 and 2014 to assess if the west- and north-adjoining site's historical auto repair uses, and the Property's historical furniture repair use had impacted the Property. Soil sample analytical results indicated that arsenic, mercury, and selenium were present at concentrations greater than Part 201 Residential Cleanup Criteria.
 - The documented presence of arsenic, mercury, and selenium in subsurface soils are considered a REC in connection with the Property.
- It is common for the historical filling of basements with the demolition debris and/or with fill from an unknown origin containing contaminants. The potential for buried demolition debris and/or fill of unknown origin to be present on the Property is considered a REC.

8.2 CONCLUSIONS

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Standard Practice E 1527-13 of at 350 South Fifth Avenue, in Ann Arbor, Washtenaw County, Michigan. Any exceptions to, or deletions from, this practice are described in Section 2.4 of this report. In the EP's opinion, this assessment has revealed no evidence of recognized environmental conditions in connection with the Property except for the following.

- The documented presence of arsenic, mercury, and selenium in subsurface soils at concentrations greater than Part 201 Residential Cleanup Criteria is considered a REC in connection with the Property (Section 4.1, 4.2.4).
- The potential for buried demolition debris and/or fill of unknown origin to be present on the Property is considered a REC (Section 4.4.2).

8.3 DATA GAPS AND LIMITING CONDITIONS

We identified two data failures in connection with this Phase I ESA.

A data failure was identified for the years 1892 to 1899; however, the use of the Property was relatively unchanged during that time, with the exception of the southeast corner of the Property that changed from

residential to church use. The data failure did not impair our ability to identify RECs; accordingly, this is not considered a significant data gap.

The Property had been developed for residential purposes by the time of the earliest available records, so we were not able to determine the first developed use. This is data failure for this Phase I ESA. It is unlikely that the Property was developed with a use other than residential prior to 1888; accordingly, this is not considered a significant data gap.

We identified no limiting conditions in connection with this Phase I ESA.

8.4 STATEMENT AND SIGNATURE OF ENVIRONMENTAL PROFESSIONAL

The Environmental Professional responsible for the conduct of this Phase I ESA was Mr. Troy D Helmick, CPG. His resume is attached in Appendix E.

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

cosign

Troy D. Helmick, CPG Project Consultant

9. DEVIATIONS

No deviations occurred as part of this Phase I ESA.

10. NON-SCOPE SERVICES

No non-scope services were provided in conjunction with this Phase I ESA.

12. GENERAL COMMENTS

SME's project team conducted this Phase I ESA to identify RECs in connection with the Property and to assess the relative significance of the identified RECs. The findings, opinions, conclusions, and recommendations presented in this report are based upon observations noted during the site visit, and information obtained during the performance of the scope of services on the dates indicated. In the process of obtaining the field and historical information in preparation of this report, procedures were followed that represent reasonable and accepted environmental practices and principles, in a manner consistent with that level of care and skill ordinarily exercised by members of these professions currently practicing under similar conditions. Records reviewed at various locations as identified within the text of this report, include only those records that were provided to SME by the referenced department on the date indicated. As such, the records provided to SME may not represent all records available at a given source. Appropriate Inquiries was made into the past uses of the Property consistent with good commercial or customary practice. As is typical with Phase I ESAs, SME conducted no testing or subsurface evaluation for this assessment.

Due to unknown or latent conditions on the Property, or on adjacent or nearby properties, which may become evident in the future, SME does not represent the Property is free of contamination or hazardous waste material. It should also be noted the Property conditions may change over time. Should additional surface, subsurface, chemical, or other data become available after the date of issue of this report, the findings, conclusions and recommendations contained in this report may have to be modified. SME should be retained to review the new information and adjust our opinion and recommendations accordingly.

All reports, field data, field notes, laboratory test data, calculations, estimates and other documents prepared by SME as instruments of service are the property of SME. No parties other than those specifically identified in this report may rely upon SME's opinions, conclusions or reports unless SME has agreed to such reliance in writing. In any event, any reliance will be subject to the terms and conditions set forth in the contractual agreement under which this work was performed.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Soil & Materials Engineers were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

RESEARCH SUMMARY

APPENDIX C

INTERVIEW DOCUMENTATION USER QUESTIONNAIRE OWNER/OCCUPANT QUESTIONNAIRE

PHASE I ENVIRONMENTAL ASSESSMENT – ALL APPROPRIATE INQUIRY USER QUESTIONNAIRE

In order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the Brownfields Amendments to CERCLA), the User of a Phase I Environmental Site Assessment (ESA) must consider the issues discussed below as part of the User's All Appropriate Inquiry (AAI) to identify Recognized Environmental Conditions (RECs) associated with the Property. This information should be provided to the Environmental Professional conducting the Phase I ESA so that a complete report can be issued.

The User may decide not to provide this information to the Environmental Professional; however, the absence of the information will be noted in the Phase I ESA report and may affect assessment conclusions. Under these circumstances, it will be the User's responsibility to determine if the Phase I ESA results, combined with results from the tasks described below, is sufficient to satisfy the requirements of All Appropriate Inquiry as defined by federal statute and regulation.

Instructions:

- 1. Fill in all blanks.
- 2. Indicate "NA" (not applicable), if appropriate.
- 3. Attach additional pages with your signature if additional space is required.

Property Name: N/A

Property Location: 350 South Fifth Avenue, Ann Arbor

County: Washtenaw

State: Michigan

Questionnaire Completed By/Title: Matthew Thomas, Assistant City Attorney

Company/ Phone Number: (734) 794-6170

On Behalf Of (if applicable):

Planned Date of Purchase/Lease (circle one):

Time Period of Site Knowledge: 2003-2014; July 2018-present

1. REASON FOR PHASE I ESA

The User of the requested Phase I ESA must make the reason for the Phase I ESA known to the Environmental Professional. Otherwise, it must be assumed that the reason is to qualify for an LLP to CERCLA liability. Please indicate the reason for this Phase I ESA of the Property.

- Due diligence/liability protection for purchase of the Property
- Due diligence/liability protection for lease of the Property
- Mortgage loan or refinance
- Foreclosure
- Other; explain

SME Project No. P02522.18

2. RECORDED ENVIRONMENTAL CLEANUP LIENS AND ACTIVITY/USE LIMITATIONS

The User is responsible to ascertain, through personal knowledge and/or a review of reasonably ascertainable recorded land and judicial records, if any environmental liens have been filed on the Property and if any activity or use limitations (AULs) have been placed on the Property because of environmental impact. You may engage a title company or other capable professional to undertake the review of reasonably ascertainable records on your behalf.

Have you conducted, or arranged to have conducted, a review of land title records in which recorded liens and activity/use restrictions would be revealed?

🛛 Yes 🗌 No

If yes, please specify who conducted the review: Liberty Title

If yes, please specify the types and locations of records reviewed: Public records

Based on your personal knowledge and/or reviews of title records, are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state, or local law?

🗆 Yes 🛛 Z No

If yes, explain briefly:

Based on your personal knowledge and/or reviews of title records, are you aware of any activity and/or use limitations, such as engineering controls, land use restrictions, or institutional controls, that are in place at the property and/or have been filed or recorded in a registry under federal, tribal, state, or local law?

Ves No If yes, identify the land use limitations/restrictions: Two recorded easements for DTE and one recorded right-of-way for DTE

3. SPECIALIZED KNOWLEDGE AND EXPERIENCE

Any specialized knowledge or experience of the User that could indicate, or create suspicion of, the presence environmental contamination on the Property must be considered as part of the AAI process. Specialized knowledge or experience includes familiarity with historic activities on the Property that could result in environmental impact, personal knowledge or experience that would indicate a risk of environmental impact associated with past Property uses, knowledge of the environmental history of the Property, and any other information that could indicate environmental impact or threat of environmental impact on the Property.

As the User of this environmental site assessment, do you have any specialized knowledge or experience related to the Property or adjoining properties?

VYes 🗆 No

If yes, explain briefly: <u>The City owned the property in the early 2000's</u>. It had been used as a YMCA. The City demolished the YMCA and it was used as a surface parking lot. It was most recently sold to a developer in 2014 and the use as a surface parking lot ended. It has never been developed since the demolition of the YMCA building.

4. RELATIONSHIP OF PURCHASE PRICE TO VALUE

Historically, environmentally contaminated properties often have been sold at prices below market value to entice buyers to acquire the property, contamination, and resultant liabilities; therefore, if a property's sale price is significantly below market value without any obvious impairments or reasons for the reduced price, the potential for environmental impact as a cause of the reduced price must be evaluated.

Does the purchase price being paid for this Property reflect the fair market value of the Property?

🗆 Yes 🛛 No

If there is a significant negative difference, can you identify the reason for the reduced price versus value? If "No" the Property may be assumed to be contaminated.

🛛 Yes 🗆 No

If yes, explain briefly: The property was repurchased by the City by virtue of a bargained-for reversionary price from the former owner. The City had the option to purchase the property at the reversionary price or the Fair Market Value, whichever was less.

5. COMMONLY KNOWN OR REASONABLY ASCERTAINABLE INFORMATION

Have you become aware, through conversations, rumor, etc., of any commonly known or reasonably ascertainable information within the local community that would indicate the Property could be contaminated (e.g. types of past uses, presence of storage tanks, use of chemicals, environmental cleanups, etc.) or that any past event (e.g. fire, chemical spill, accident, etc.) could have resulted in environmental impact of the Property or adjoining properties.

🗆 Yes 🔽 No

If yes, explain briefly:_____

SME Project No. P02522.18

6. PROCEEDINGS INVOLVING THE PROPERTY

Do you, the User of this environmental site assessment, based on your knowledge and experience related to the property, have any knowledge of any of the following:

Pending, threatened, or past litigation related to hazardous substances or petroleum products in, on or arising from the Property?

🗆 Yes 🛛 No

If yes, explain briefly:_____

Pending, threatened, or past administrative proceedings related to hazardous substances or petroleum products in, on or arising from the Property?

🗆 Yes 🛛 🖉 No

If yes, explain briefly:_____

Notices from any governmental entity regarding any possible violation of environmental laws or regulations or possible liability relating to hazardous substances or petroleum products in, on or arising from the Property?

PHASE I ENVIRONMENTAL ASSESSMENT (ESA) PROPERTY OWNER/OCCUPANT QUESTIONNAIRE

This questionnaire concerns the current and historical uses and conditions of the referenced property and will be included within the Phase I ESA report. Questionnaire answers should be based upon the owner/occupant's reasonable knowledge of current and historical use and activities at the property.

Instructions:

- 1. Fill in all blanks.
- 2. Indicate "NA" (not applicable), if appropriate.
- 3. Attach additional pages with your signature if additional space is required.

Property Name: Property Location: 350 South Fifth Avenue, Ann Arbor State: Michigan County: Washtenaw Questionnaire Completed By/Title: Matthew Thomas, Assistant City Attorney Company/ Phone Number: (734) 794-6170 On Behalf Of (if applicable): _____ Year of Purchase/Lease (circle one): Time Period of Site Knowledge: 2003-2014; July 2018-present Names/Phone Numbers of Former Owners/Occupants: Owners: Dennis Dahlmann Occupants: Names/Phone Numbers of other persons who have knowledge of property history: **PROPERTY DESCRIPTION AND USE** 1. Provide a general description of the property: 2. Describe the structures present on the property (number, size, and construction date):_ The Property has been a surface parking lot since the YMCA that had been on the site was demolished in 2008. It was not used as a parking lot from 2014-current. Parking on the property will resume shortly.

3. Identify utilities available to the property (check box and indicate provider):

	Electric:
4.	Are there any easements at the property?:
\checkmark	Yes 🗌 No
lf y	es, where are the easements located?:
5.	To the best of your knowledge, identify if the following were formerly (F) or are currently (C) present on the property. Select NA if not applicable to the property. F C NA C NA C NA C NA C NA C Septic fields, drain fields, or dry wells C Abandoned wells C Aboveground sumps, lines, basins, or tanks C Aboveground storage tanks (ASTs) C Transformers or capacitors C Other PCB containing equipment C Mines or pits C Abit Added the chemical materials or wastes C Other PCB containing equipment C Abit Added the chemical materials or wastes C Other prist C Other prist of the comparise of the
6.	What is the general use of property:
	Industrial 🗌 Commercial 🗍 Residential 🗹 Other
7.	What products/services are produced/provided at the property?:
8.	What type of on-site processes are used at the property?:
9.	What types of equipment are used at the property?:
10.	What raw materials are used at the property?:

11.	Are there any environmental permits (e.g. solid waste disposal, hazardous waste disposa	I,
	wastewater, NPDES, etc.) associated with the property?:	

🗌 Yes 📝 No

If yes, list the applicable permit(s):_____

Map Unit Legend

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AO
FoB	Fox sandy loam, till plain, 2 to 6 percent slopes	0.8	100.0%
Totals for Area of Interest		0.8	100.0%

Washtenaw County, Michigan

FoB—Fox sandy loam, till plain, 2 to 6 percent slopes

Map Unit Setting

National map unit symbol: 2wvh5 Elevation: 650 to 1,250 feet Mean annual precipitation: 31 to 40 inches Mean annual air temperature: 46 to 50 degrees F Frost-free period: 145 to 175 days Farmland classification: All areas are prime farmland

Map Unit Composition

Fox and similar soils: 90 percent Minor components: 10 percent Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Fox

Setting

Landform: Outwash plains, outwash terraces Landform position (two-dimensional): Summit, shoulder Landform position (three-dimensional): Crest, tread Down-slope shape: Convex Across-slope shape: Convex, linear Parent material: Loamy glaciofluvial deposits over sandy and gravelly outwash

Typical profile

Ap - 0 to 9 inches: sandy loam Bt1 - 9 to 27 inches: sandy clay loam Bt2 - 27 to 33 inches: gravelly loam 2C - 33 to 79 inches: stratified sand to gravel

Properties and qualities

Slope: 2 to 6 percent
Depth to restrictive feature: 20 to 40 inches to strongly contrasting textural stratification
Natural drainage class: Well drained
Runoff class: Low
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.60 to 2.00 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum in profile: 55 percent
Salinity, maximum in profile: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)

Available water storage in profile: Low (about 5.5 inches)

Interpretive groups

Land capability classification (irrigated): None specified Land capability classification (nonirrigated): 2e Hydrologic Soil Group: B Hydric soil rating: No

Minor Components

Matherton

Percent of map unit: 6 percent Landform: Drainageways on stream terraces, drainageways Landform position (two-dimensional): Footslope Landform position (three-dimensional): Tread Down-slope shape: Linear Across-slope shape: Concave Hydric soil rating: No

Sebewa

Percent of map unit: 4 percent Landform: Drainageways, drainageways on stream terraces Landform position (two-dimensional): Toeslope Landform position (three-dimensional): Tread Down-slope shape: Linear Across-slope shape: Concave Hydric soil rating: Yes

ANITA H. KETOLA, CHMM PROJECT CONSULTANT

📞 (248) 938-2382 🛛 🖾 anita.ketola@sme-usa.com

- Environmental Services
- Site Assessments and Due Diligence
- EHS Regulatory Compliance
- Project Management

BACKGROUND

Anita is a Project Consultant and Certified Hazardous Materials Manager (CHMM) in SME's Plymouth office. As a member of our Environmental Services group, she manages a variety of projects including environmental due diligence, site assessments for brownfield redevelopment support, underground storage tank (UST) closures and assessments, hazardous building materials assessment, and abatement projects. She is a licensed Asbestos Inspector through the Asbestos Hazard Emergency Response Act (AHERA) program. Anita has 15 years of experience providing due diligence services. Her expertise includes due diligence, environmental health and safety (EH&S) compliance and auditing, industrial hygiene, environmental assessment, and remedial design and oversight.

RELATED PROJECT EXPERIENCE

Performed over 190 Phase I Environmental Site Assessments (ESAs) on a variety of properties including gas stations, industrial facilities, multi-tenant residential, retail, commercial/office, and large portfolios.

Completed compliance and operations reviews for large portfolios of gas stations properties in Michigan, Ohio, Indiana, Illinois, Missouri, North Carolina, South Carolina, Tennessee, and Virginia.

Performed numerous Phase II ESAs, including soil boring and monitoring well installation, coordination of magnetometer survey, tank removals, Baseline Environmental Assessments, and Documentation of Due Care Compliance.

Assisted in wetland delineation and permit application activities for site development of large retail stores in Michigan.

Conducted air quality and industrial hygiene monitoring for analysis of radon, mold, asbestos, dust, metal working fluids, volatile organic compounds, metals, and noise at numerous multi-tenant residential, offices, hospitals, schools, manufacturing, retail, and bulk petroleum facilities.

Performed insurance claim investigation and oversight on projects associated with petroleum and industrial chemical releases, remediation, underground storage tank removals, and other EH&S related claims. Provides value to insurance clients by quickly understanding and clearly communicating what is reasonable and necessary regarding an insured's response to a claim and what the reasonable and necessary level of effort is required to obtain incident closure.

Conducted several EH&S compliance and management system audits for the automotive and manufacturing industry.

Developed job safety analysis, risk assessment, and machine specific energy control procedures for several automotive, manufacturing, research and development, and beverage facilities.

Developed a global asbestos management and abatement program and assisted in the development of a global audit program for a leading beverage company.

# **APPENDIX D** QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

# TROY D. HELMICK, CPG

PROJECT CONSULTANT

📞 (248) 982-5149 🛛 🔤 troy.helmick@sme-usa.com

- Environmental Services
- Regulatory Compliance and Due Diligence
- Site Assessments and Audits
- Project Management

## BACKGROUND

Troy is a Project Consultant and Certified Professional Geologist (CPG) in SME's Plymouth office. As a member of our Environmental Services group, he manages a variety of projects including environmental due diligence, compliance and regulatory requirements associated with petroleum remediation and emergency response activities, underground and aboveground storage tank (UST/AST) assessments and removals, and groundwater and soil contaminant investigations. Troy has more than 20 years of experience providing comprehensive environmental consulting. His expertise includes onsite vapor, groundwater and soil contaminant investigations.

## **RELATED PROJECT EXPERIENCE**

Project Manager for a high-profile redevelopment of a former automotive manufacturing facility. Environmental services included preparation of Due Care and work plans, coordination of disposal of hazardous materials, successful implementation of groundwater discharge permit, regulatory management and closure of found subsurface structures, and risk based guidance of environmental conditions during construction.

Consultant and Project Manager responsible for preparing detailed site assessment and remediation models for client sites regarding environmental regulatory compliance and regulatory closure; and maintaining ongoing relationships with regulatory officers to facilitate regulatory compliance and gain a thorough understanding of the current regulatory climate.

Consultant and Project Manager for diverse oil and gas clients. Responsible for regulatory body compliance reporting; environmental compliance auditing, site inspections and audits; contractor oversight; and safety performance monitoring and reporting. Corrective action experience includes working with soil vapor extraction, air sparge, pump and treat, product skimmers and multi-phase recovery systems. Successfully developed and implemented activities to achieve regulatory No Further Action or Closure.

Project manager for environmental emergency response/remediation modeling projects. Supervised, coordinated and performed environmental spill emergency response activities for multiple petroleum pipeline and toxic chemical releases throughout the country. Provided oversight and coordination of subcontractors during various environmental remedial activities such as remediation system and monitoring well installations, and UST/AST removals, excavations and site decommissioning.

### **EDUCATION**

B.A., Geological Sciences, Albion College

### **REGISTRATIONS AND CERTIFICATIONS**

Certified Professional Geologist - American Institute of Professional Geologists

### **PROFESSIONAL DEVELOPMENT**

American Petroleum Institute WorkSafe Certified Hazard Recognition Plus[™] HAZWOPER 40-Hour Training Course HAZWOPER 8-Hour Refresher Training Course First Aid/CPR/AED Certified – American Heart Association

# CHERYL A. KEHRES-DIETRICH, CGWP VICE PRESIDENT

- Environmental Services
- Remediation Alternatives
- Quality Assurance Officer
- EPA Assessment Grants

## BACKGROUND

As SME's Chief Hydrogeologist, Cheryl provides senior project management and serves as a senior technical resource for SME's Environmental team. She has 34 years of experience as a hydrogeologist focusing on large/complex sites and brownfield redevelopment from the technical side. Services have included remedial investigations, risk evaluation of relevant exposure pathways, development of conceptual site models (CSMs), development and implementation of remedial response plans, and preparation of closure reports and restrictive covenants for commercial sites, industrial facilities, brownfields, and UST sites. She has developed practical remediation and reuse strategies for nonagueous-phase liquids (NAPL), vapor intrusion (VI), volatile organic compounds, semi-volatile organic compounds and polynuclear aromatic hydrocarbons, PCBs, metals, and methane. She is responsible for SME's environmental subsurface training and quality assurance/quality control program. Cheryl serves as SME's senior contact with Michigan Department of Environmental Quality (MDEQ) on Part 201 remediation and closures, and has extensive experience in underground storage tank (UST) closures. Her project work includes serving as SME's program director for energy clients providing environmental services related to a variety of sites including energy generation, transmission, service centers and historic manufactured gas plants.

### **RELATED PROJECT EXPERIENCE**

Principal Consultant for the environmental aspects of the Frank Rewold and Sons Mixed-Used Development in Rochester, Michigan. The development includes a fivestory luxury condominium structure, four-story Rewold headquarters office building, and a future commercial structure (TBD). The development is located at a former industrial property with significant chlorinated-VOC contamination. The potential for vapor intrusion associated with the chlorinated- VOC impact remaining on the property and the potential for direct contact with impacted soil are the main human exposure pathways of concern. The liable party has ongoing obligations under an Administrative Order of Consent, and associated Remedial Action Plan (RAP), which includes gauging and sampling existing groundwater monitoring wells and evaluating performance of two existing below grade, permeable reactive barriers. SME worked closely with the liable party and MDEQ to demonstrate via a groundwater model that the proposed development would not exacerbate the existing groundwater conditions and flow. Our team designed an active vapor mitigation and monitoring system for the first floor enclosed building space that includes roll-out HDPE membrane, spray-applied barrier systems, and post installation monitoring ports and pressure gauges. In addition, we designed dermal contact barriers, specialized geopier and deep foundation systems, and water-tight utility line/stormwater detention systems. Construction of the condominium structure is 85% complete and the office building is 50% complete.

## **RELATED PROJECT EXPERIENCE CONT.**

Principal Consultant for **Jackson County Airport – Reynolds Field** for environmental services associated with the only new runway project completed in the country in 2017. SME provided construction environmental services including excavation of approximately 195,000 cubic yards of landfill material from one area and approximately 4,200 cubic yards of landfill material from another. Excavated material was transported for disposal at a regulated offsite Type II landfill. SME observed and documented the excavation and loading of waste material into trucks for transport to Woodland Meadows Landfill, prepared daily field observation reports, performed air monitoring, assisted with identifying unusual materials for segregation and characterization (including 87 drums and approximately 80 hot water heaters with fibrous insulation), and surveyed completed excavation sidewalls and floor areas using a Focus 35 Robotic Station. The main excavation was conducted in 2015 and 2016, with the secondary excavation conducted in 2017.

Principal Consultant for construction of Jimmy John's Field minor league baseball stadium, 800-space parking lot, and community playground and whiffle ball field on two unregulated landfills in downtown Utica, Michigan. Documented waste material is present across the property and to depths of more than 20 feet below grade. Various organic and inorganic constituents were measured in soil and groundwater at concentrations exceeding Michigan's generic cleanup criteria (the Part 201 criteria). Methane gas levels exceeded the lower explosive limit (LEL) in the subsurface. Redevelopment of the property included the installation of buildings, pavement, and landscaping that act as dermal contact barriers (exposure barriers) to lead-impacted fill remaining below those areas. Building and pavement areas were constructed over approximately one foot of crushed aggregate. Greenspace areas, including the baseball field, outfield berms, and perimeter landscaping, were constructed with a geotextile and at least one foot of topsoil, aggregate, woodchips, or other appropriate cover material. Methane gas mitigation controls were installed consisting of: 1) passive vents along the west property boundary and, 2) a sub-slab vapor barrier and passive ventilation system (VB/PVS) beneath the stadium structures. The sub-slab vapor barrier and passive ventilation system (VB/PVS) consists of a spray-applied vapor barrier (Geoseal®) and a passive sub-slab depressurization system, which vents to seven vertical risers and wind turbines located on the stadium towers and first floor grand stand roof. The project involved securing financial incentives, designing environmental controls and mitigation measures, and providing Due Care and Health and Safety Plan (HASP) consulting. Financial incentives included \$1,000,000 Clean Michigan Initiative Loan; \$700,000 USEPA Brownfield Revolving Loan Fund grant and loan; and \$800,000 Surface Water Quality Initiation Fund grant. The project received the 2016 CREW-Detroit "Special Impact" award for Best Overall Design and Impact, the 2017 ACEC Engineering Excellence Award, and the 2017 Phoenix Community Impact Award and People's Choice Award.

Principal Consultant for environmental services to support the **Gordie Howe International Bridge** project in southeast Michigan for the Michigan Department of Transportation (MDOT). To date, SME has conducted 33 Preliminary Site Investigations (PSIs) and prepared 33 Due Care Evaluations. Services include preparation of work plans, onsite soil and groundwater assessments, and preparation of environmental summary reports and Due Care plans for use during construction planning. The Due Care evaluations are for preconstruction activities and include a summary of environmental conditions, review of potential exposure pathways based on site contaminants, activities to address due care obligations, and estimation of quantities of contaminated materials for construction planning.

## **RELATED PROJECT EXPERIENCE CONT.**

Principal Consultant for historical releases at a **petroleum terminal** with four above ground storage tanks (ASTs) varying in size from 25,000 barrels (BBL) to 55,000 BBL. The releases included an approximately 300,000-gallon release of gasoline within the dike area of the 55,000 BBL AST in 1974, and smaller releases of petroleum in 1993, 1994, and 2003. SME was retained in 2013 to review the current site conditions with up to date non-aqueous phase liquid (NAPL) principles and MDEQ regulations. SME is helping to facilitate an area-wide approach for commingled contamination with terminals to the north and south of the site to assist in achieving No Further Action (NFA) status for the petroleum company.

Senior Project Manager and Consultant for assessment and environmental response action at a **40-acre park** in a metro Detroit suburb that had historically been used for sand mining and landfilling. Conducted extensive assessment activities and developed environmental response actions to address subsurface methane and lead-impacted surface soils. Methane gas was mitigated by a passive ventilation trench along one boundary of the site and incorporating a sub-slab vapor barrier over a passive ventilation system beneath each building. Developed a cost-effective site capping and reuse plan to allow construction of soccer fields on a portion of the site and reserve the remainder of the site for future use, all while protecting the public from exposure to environmental impacts. Response plan was reviewed and approved by the MDEQ. The remedy for the soccer fields was completed in 2012, funded in part by a \$1,000,000 loan from an EPA revolving loan fund (RLF) grant. A farmer's market was constructed in 2014 on the east portion of the site and an open pavilion was constructed south of the farmer's market in 2017.

Principal Consultant for redevelopment of an 1880-era structure in historic downtown Tecumseh, Michigan. Clean Michigan Initiative (CMI) grant funding was used to address environmental concerns to redevelop the site for a full service Mexican restaurant. Used for dry cleaning operations from about 1935 to 1953, the site was contaminated with dry cleaning solvents. Environmental response activities included removal of contaminated surficial concrete and asphalt; removal of four small unregulated underground storage tanks (USTs); disposal of UST rinseate; removal of about 320 tons of contaminated soil from the basement and exterior portions of the site; installation of VaporBlock[®] Plus[™] and a new concrete floor slab in the basement to cover the underlying contaminated soil and former concrete floor; placement of a geotextile fabric to demarcate soil excavation boundaries in select areas of the site; and placement of approved backfill (imported from a local gravel pit) to restore grade following completion of contaminated soil excavation activities.

Providing senior consulting for numerous **EPA Assessment Grants** and serving as the SME Quality Assurance Officer for multiple grants in the Midwest.

Project Manager and Senior Consultant for numerous contamination investigations for a major **Michigan utility company**. Services included determination of the extent of contamination, evaluation of exposure pathways, development of remediation alternatives, and implementation of selected remedies, including thermal treatment, soil vapor extraction, groundwater pump and treat, and air sparging.

Project Manager for a remedial investigation of PCB and volatile organics at one of the ramps for the **Zilwaukee Bridge**, north of Saginaw, Michigan. The ramp, which carries a major traffic load, had been built over part of an old landfill. Conducted investigation without interruption to traffic services to determine extent of soil and groundwater contamination. Developed remedial alternatives for the site, including provisions for isolating site from adjoining landfill.

## **RELATED PROJECT EXPERIENCE CONT.**

Senior Project Manager and/or Chief Technical Consultant for ten **Manufactured Gas Plant (MGP)** sites for two Michigan energy companies. Services included remedial investigations; evaluations of the extent of coal tar and non-aqueous phase liquids (NAPLs); risk evaluations of relevant exposure pathways; preparation of remedial investigation reports, interim remedial action plans and specifications; completion of interim remedial actions; and preparation of restrictive covenants. Developed cost models and strategies to bring various MGP sites to No Further Action (NFA) status.

Project Manager for environmental monitoring at numerous construction sites for a major **Michigan educational institution**. For one project a total of 107,981 CY of soil was removed from the site and disposed of at a licensed landfill. Project included soil probes and test pits to evaluate the condition of the soil to be removed, installation and sampling of groundwater monitoring wells, analyses of 162 Verification of Soil Remediation (VSR) samples, and preparation of a report documenting the effectiveness of the soil excavation effort.

Senior Project Hydrogeologist for investigation and interim corrective action of 60-acre site where a **combined sewer overflow (CSO) facility** was constructed in Saginaw, Michigan. Contaminants which were found in soil and groundwater at the site included elevated levels of lead, cadmium, zinc, volatile organic compounds, pesticides and numerous base/neutral organic compounds. Responsible for remedial investigation design, evaluation of remedial investigation finds, providing hydrogeological input into interim corrective action plan, interfacing with Michigan Department of Natural Resources, and evaluating the interim corrective action design for consistency with Michigan rules. Interim corrective action included a pilot study in association with the University of Michigan for "in situ" remediation of a stockpile of excavated soil from the CSO retention basin area.

### **EDUCATION**

B.S., Geology, Michigan State University M.S., Geology, Specialization in Hydrogeology, Michigan State University
