

City of Ann Arbor, MI

Water and Sewer Cost of Service Study Final Report

June 27, 2018

June 26, 2018

Ms. Lynne Chaimowitz Budget and Finance Supervisor City of Ann Arbor 301 E. Huron Street Ann Arbor, Michigan 48104

Re: Water and Sewer Cost of Service Study – Final Report

Dear Ms. Chaimowitz,

Stantec Financial Services is pleased to present this Final Report for the Water and Sewer Cost of Service Study (Study) that we performed for City of Ann Arbor, Michigan (City). We appreciate the fine assistance provided by you and all of the members of the City staff and community stakeholders who participated in the Study.

If you or others at the City have any questions, please do not hesitate to call me at (813) 204-3331 or email me at andrew.burnham@stantec.com. We appreciate the opportunity to be of service to the City, and look forward to the possibility of doing so again in the near future

Sincerely,

CLJ. Th

Andrew J. Burnham Vice President

777 S. Harbour Island Blvd., Suite 600 Tampa, Florida 33602 (813) 204-3331 andrew.burnham@stantec.com

1. EXECUTIVE SUMMARY

1.1 INTRODUCTION

This Executive Summary presents an overview of the results of the Cost of Service Study (Study) that was conducted for the water and sewer systems (collectively referred to as the "Utility" hereafter) of the City of Ann Arbor, Michigan (City) by Stantec Consulting Services Inc.

1.2 OBJECTIVES

The principal objectives or components of the Study were as follows:

Water and Sewer Revenue Sufficiency Analysis - Develop and populate multi-year forecasting models for the City's water and sewer systems, respectively, that will determine the level of annual revenue required to satisfy each system's projected annual operating, debt service, and capital cost requirements while maintaining adequate reserve levels.

Cost of Service Analysis - Complete a thorough cost allocation process to reflect the appropriate distribution of system costs to system functions and ultimately rate classes based upon observed data, such as average day, maximum day, and peak hour demands to ensure a fair and equitable distribution of costs by rate classification.

Rate Calculation - Review the Utility's existing rate structures and develop modifications, as appropriate, to ensure that its rates reflect accepted industry practice and an equitable distribution of costs, while enhancing transparency and adherence to cost-based pricing principals.

1.3 PUBLIC ENGAGEMENT

In addition to comprehensively addressing the technical aspects of conducting the Study, a robust public engagement effort was conducted. Public engagement was critical to the Study as it served to ensure the community's needs, concerns, and objectives were being addressed, while enhancing transparency and understanding of the rate setting process for the City's water and sewer systems. Public engagement was organized into several distinct steps, including the formation of an Advisory Group that met several times during the course of the Study to review the analysis and provide feedback, conducting focus groups, surveying the community, and providing updates on the A2gov.org website, email, and postings.

1.4 REVENUE SUFFICIENCY

This component of the analysis evaluated the sufficiency of the Utility's water and sewer revenues to meet all of its current and projected financial requirements over a ten-year projection period for the water and sewer systems, and determined the level of any rate revenue increases necessary in each year of

the projection period to provide sufficient revenues to fund all identified cost requirements. With City staff and the Advisory Group, the base data and assumptions of the analysis, as well as several alternative scenarios for the water and sewer utilities, respectively, were reviewed. Through this process, the recommended financial management plan and associated plan of annual water and sewer rate revenue increases presented herein were developed to address the projected cost requirements of the Utility.

The recommended financial management plan and corresponding plan of water and sewer rate revenue adjustments are based upon the revenue and expense information, beginning balances, and assumptions as described in Section 3 of the report. Appendices A1 and A2 of this report includes detailed schedules presenting all components of the financial management plan developed for the Utility. Additionally the City has been provided the two financial models to allow for future updates to the plan as needed.

The recommended five-year rate revenue adjustment plan is presented in the table below. It is important to note that the FY 2019 revenue increases are intended for mid-fiscal year (1/1/2019) implementation, while all cost of service-based adjustments are intended for implementation effective on 7/1/2018.

| | | | · · · · · · · · · · · · · · · · · · · | | |

E1 Recommended Plan of Water & Sewer Rate Revenue Adjustments

1.5 COST OF SERVICE

A cost of service analysis was performed to identify and allocate the cost of providing water and sewer services to the Utility's respective rate classes. The cost of service analysis fundamentally sought to assign the cost of the respective components for each system proportionality to rate classes based upon their service characteristics and usage of the system. In doing so, this analysis created a strong relationship or nexus between the users of system and the cost of providing service to each rate class. Importantly, the legal environment within the State of Michigan dictates that municipal service providers construct rates that adhere strictly to proportional usage and cost of service principles. Communities that chose to deviate from these legal guidelines do so at the risk of legal challenge. As such, and in recognition of the environment that the Utility operates within, every effort has been made to enhance the defensibility of its rates, promote transparency, and ensure that its rates are fair, equitable, and recover the cost requirements of the Utility. The following graphic displays the comparison between the current cost to serve each rate class and the current revenue remittance by those same rate classes. From the graphic it is evident that the Residential and Water Only rate classes are being charged less than the cost to serve them, while the rates being applied to Multifamily and Non-Residential (i.e. commercial) customers are recovering more than the identified cost to serve those classes.

E2 Combined water and sewer cost of service results

1.6 RATE CALCULATION

Stantec examined the Utility's current water and sewer rates and developed recommended rate structure modifications that i) fairly and equitably recover the Utility's current cost of service and revenue requirements from each rate or customer class, ii) conform to accepted local and national industry practices, iii) ensure fiscal stability and reasonable recovery of fixed costs, iv) minimize administrative burden and enhance the ability to be easily understood by residents and customers.

Common industry practice is to develop a two-part rate structure comprised of both fixed and variable charges. Generally accepted practice recovers a portion of system costs in a fixed charge, recognizing that utilities have substantial cost that are customer-specific, such as meter replacement, public fire protection, and customer service costs that are incurred year-round. Utilities incur these costs regardless of the level of customer water use. Failure to establish a proper level of fixed cost recovery subjects the Utility to revenue volatility in certain conditions, such as abnormal weather or economic events.

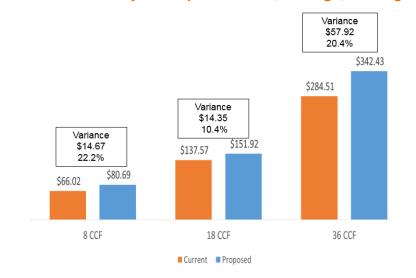

The Utility presently has a fixed quarterly charge based upon meter size that is applied for both water and sewer service, respectively. It is recommended that the Utility update its fixed charges to reflect the current cost for meter replacement, public fire protection, and administrative activities. Specifically, the fixed charge should recover administrative costs (such as customer service, billing and collection, meter reading, etc.) equally per meter, meter replacement cost based on the specific cost and useful life of each meter size, and public fire protection costs based upon meter size.

As it relates to the Utility's usage or metered volume-based rates, it is recommended that:

- 1. An a new tier is added to the inclining block water rate structure of the Residential class, and adjust the volume included in all tiers to reflect current usage profiles and local data (see Section 2).
- 2. The pricing of each tier of the Residential inclining block structure is adjusted to comport with the cost of service findings and enhance intra-class equity.

- 3. A uniform rate structure is applied to all metered water use for all other rate classes (Multifamily, Non-Residential, and Water Only) based upon the revenue requirement from the cost of service analysis for each respective rate class to be recovered in usage-based rates divided by total observed water volume for each rate class.
- 4. The Utility continues to apply a single usage or metered volume-based rate for sewer service to all customer or rate classes based upon the portion of the revenue requirement to be recovered in usage-based rates divided by total billed sewer volume from the test-year.

The following graphics present the quarterly water and sewer bill impacts to customers at various levels of water use resulting from the recommended rates intended for implementation on 7/1/18. The first graphic displays the quarterly bill impact to Residential customers at 8, 18, and 36 hundred cubic feet (CCF) per quarter, and demonstrates that single family customers of the City would see an increase, mainly associated with a cost of service adjustment to bring revenue collection from the Residential class into alignment with the current cost of providing service. Additionally Non-Residential, Multifamily, and Water Only billing impacts have been provided to highlight the changes for those rate classifications.

2. INTRODUCTION

Stantec Consulting Service Inc. (Stantec) has conducted a comprehensive Cost of Service Study (Study) for the water and sewer systems (collectively referred to as the "Utility" hereafter) of the City of Ann Arbor (City). This report presents the approach, methodologies, source data, assumptions, as well as the findings and recommendations of the Study.

2.1 BACKGROUND

The City owns and operates a water utility system that supplies approximately 125,000 people with an average daily water volume of 14 million gallons per day (14 MGD). The City's water supply is sourced mainly from the Huron River (85%) and then mixed with ground water from wells (15%). Once treated, the City distributes the water to its customers though five pressure districts, four remote pump stations, and two elevated storage tanks. The following map displays the current water service area for the City.

The City owns and operates two wastewater treatment facilities with a combined treatment capacity of 29.5 MGD, and a collection system consisting of both gravity sewers and force main sewers to collect and deliver wastewater to the plants for treatment and disposal. Included in the wastewater collection system are 360 miles of sewer mains, 10,300 manholes, and 8 sewage lift stations.

The City completed its last cost of service study in 2003 (about 15 years ago). In 2016, the City issued a request for proposals to retain a consultant to perform a comprehensive study of the Utility's revenue sufficiency, cost of service, and rate structure, while engaging in a robust public engagement effort. Stantec was ultimately selected to conduct the study, the results of which are included herein. The intent of the update was to utilize most current industry practices, best available data, and reflect changing legal requirements to establish fair and equitable rates.

2.2 OBJECTIVES

The principal objectives or components of the Study are as follows:

Water and Sewer Revenue Sufficiency Analysis - Develop and populate multi-year forecasting models for the City's water and sewer systems, respectively, that will determine the level of annual revenue required to satisfy each system's projected annual operating, debt service, and capital cost requirements while maintaining adequate reserve levels.

Cost of Service Analysis - Complete a thorough cost allocation process to reflect the appropriate distribution of system costs to system functions and ultimately rate classes based on observed data, such as average day, maximum day, and peak hour demands to ensure a fair and equitable distribution of costs by rate classification.

Rate Calculation - Review the Utility's existing rate structures and develop modifications, as appropriate, to ensure that its rates reflect accepted industry practice and the equitable distribution of costs, while enhancing transparency and adherence to cost-based pricing principals.

2.3 PUBLIC ENGAGEMENT

In addition to comprehensively addressing the technical aspects of conducting the Study, a robust public engagement effort was conducted. Public engagement was critical to the Study as it served to ensure the community's needs, concerns, and objectives were being addressed, while enhancing transparency and understanding of the rate setting process and the City's water and sewer systems. Public engagement was organized in several distinct steps as detailed below:

Community Engagement Plan:

- Forming a Public Advisory Group
- Conducting Focus Groups
- Surveying the community
- Providing updates on the A2gov.org website, email, and postings

Advisory Group:

The Advisory Group was formed utilizing the City's Stakeholder Analysis Toolkit. The Advisory Group membership included about 30 rate payers, subject matter experts, City staff, and consultants. The Advisory Group met on five occasions between July and December of 2017, and concluded with a consensus as to the financial plan, cost of service, and rate design recommendations of this Study that was presented to City Council for their consideration. Of note, the Advisory Group repeatedly expressed an interest in exploring affordability and bill assistance programs outside of the context of the Study.

Focus Groups:

Focus Groups were held on November 6 and 13, 2017 with a total of six stakeholder participants. The meetings were advertised on the A2 website, email lists, and media. Study objectives were reviewed and a series of questions were posed to participants related to: comments, concerns, and issues regarding the City's water and sewer services; methods for receiving information about the water and sewer utilities, thoughts on water quality in the City; thoughts on controlling costs; comments or issues regarding water bills; and comments on infrastructure costs.

Opportunities identified by the stakeholder comments included:

- Plan and execute a multi-media public education campaign on efficient water use, peak usage periods, and irrigation demand management with information on how each affects/impacts water and sewer system costs.
- Develop a water cellular telephone application based on input from a water stakeholder group. Users of the application would monitor their own water usage, receive alerts, and be able to pay bills. Evaluate CityInsights (a water application developed for DWSD customers) or work with U of M students to create one.

City-wide Survey:

A short 11 question survey regarding the City's water and sewer utility system was posted on the City of Ann Arbor's Website, Social media channels (Facebook, NextDoor, and Twitter), and other communication channels such as Gov. Delivery, a MLive Article, a radio interview, and a press release by the City. The survey was open in May and completed in June of 2017. The survey responses were compiled and shared with the Advisory Group to provide insight into issues and concerns related to the system. A total of 684 responses were received and 95% were identified as City residents.

Key takeaways from the survey:

- The current condition of water and sewer infrastructure was rated as 46% Good or Better, 31% Fair or Poor, and 23% didn't know.
- The quality of the water and sewer services were 31% overall very satisfied, 47% satisfied, 8% dissatisfied or very dissatisfied, and 14% neutral.
- The #1 concern regarding the water and sewer service was having area lakes and rivers safe for swimming, fishing, and other recreation (93%). Following closely in concern was having the ability to drink quality water straight from the tap (90%), and thirdly, having a robust water supply to sustain the Ann Arbor community through a crisis (85%).
- When asked about respondent's viewpoint on water and sewer costs to the household:
 - 73% are willing to pay a higher bill to improve and modernize the systems to ensure safe and reliable water and sewer service.
 - 27% believe their bill is too high and would not be willing to pay more to sustain and modernize the water and sewer system.
- Respondents were asked if they would be willing to pay more for certain aspects of service:

- 81% are willing to pay more to sustain and modernize.
- 79% would pay more to sustain water quality and public health.
- 68% would pay more to improve the natural environment.
- 63% would pay more to assist low income residents.
- Respondents were asked how they receive information about the water and sewer utility:
 - 79% Water/Sewer Bills
 - 56% Mlive.com or other newspapers
 - 48% Waste Watcher
 - 40% Water Matters
 - 30% City Website/Email
 - Others Noted Frequently: Next Door App and Water Plant Tours

3. REVENUE SUFFICIENCY

3.1 DESCRIPTION

This section presents the financial management plan and corresponding plan of water and sewer rate revenue adjustments developed in the revenue sufficiency analysis (RSA) that was conducted as part of the Study. The following sub-sections of the report present a description of the source data, assumptions, and results of the RSA, while Appendix A1 and A2 includes detailed supporting schedules for the respective water and sewer financial management plans identified herein. While data for FY 2017 may be referenced, it was not considered to be part of the ten-year projection period of the RSA.

During the RSA, several alternative multi-year financial management plans and corresponding water and sewer rate revenue adjustment plans were reviewed through several interactive work sessions conducted with City staff and the Advisory Group. During these work sessions, the impact of various inputs or assumptions upon key financial indicators were reviewed by use of graphical representations projected on a large viewing screen from interactive computer rate models. In this way, the recommended financial management plan and corresponding plan of annual water and sewer rate revenue adjustments presented in this report were developed that will allow the Utility to fund its cost requirements throughout the projection period and meet its financial performance goals and objectives.

In order to initialize the RSA, the historical and budgeted financial information regarding the operation of the Utility, as well as historical customer counts and billed volume data by rate class was obtained. The Utility also provided its multi-year capital improvement programs (CIP), and current debt service obligations and covenants, or commitments made to lenders, relative to net income coverage requirements, reserves, etc. There were also discussions with City staff regarding other assumptions and policies that would affect the financial performance of the Utility, such as trends in demands, planned developments/customer growth, debt coverage levels, levels of reserves, capital funding sources, earnings on invested funds, escalation rates for operating costs, etc.

All of this information was entered into two separate versions (one for the water and sewer system, respectively) of the financial module of Stantec's Financial Analysis and Management System (FAMS-XL) interactive modeling system. This module of FAMS-XL produced a ten-year projection of the sufficiency of the revenue provided by the current rates of each system to meet current and projected financial requirements, and determined the level of rate revenue increases necessary in each year of the projection period to satisfy the water and sewer system's respective annual financial requirements.

The financial module of FAMS-XL utilizes all projected available funds in each year of the projection period to pay for capital projects. The module was set up to reflect the rules of cash application as defined and applied by City staff, and it produces a detailed summary of the funding sources to be used for each project in the CIP. To the extent that current revenues and unrestricted reserves are not adequate to fund all capital projects in any year of the projection period, the module identifies a borrowing requirement to fund those projects, or portions thereof that are determined to be eligible for borrowing. In

this way the FAMS-XL modeling system is used to develop a borrowing program that includes the required borrowing amount by year and the resultant annual debt service requirements for each year in the projection period.

3.2 SOURCE DATA

The following presents the key source data relied upon in conducting the RSA:

3.2.1 Fund Balances

The FY 2016 Comprehensive Annual Financial Report (CAFR) and supporting trial balance schedules provided by City staff were used to establish the beginning FY 2017 balances as of June 30, 2016 for the City's water and sewer enterprise funds, respectively.

3.2.2 Revenues

The revenues utilized in the RSA reflect an evaluation of multiple years of historical results, FY 2017 unaudited results, the FY 2018 Budget, and the FY 2019 Proposed Budget. Revenues consist of rate revenue, capital recovery charges, interest income, and other minor revenue from miscellaneous service charges. Rate revenue is based upon FY 2016 actual results, adjusted annually to reflect assumed customer growth, changes in demand, and rate increases. Miscellaneous service charge revenue projections are based upon the amounts within the FY 2019 Proposed Budget. Interest income was calculated annually based upon projected average fund balances and assumed interest rates, and capital recovery charge revenue was calculated based on the assumed growth in accounts and current fees.

3.2.3 Operating Expenditures

The Utility's operating expenditures include all operating and maintenance expenses, transfers into and out of the fund, debt service requirements, and expected capital outlays. The RSA based operating expenditure projections on the individual expense categories and expenses amounts within the FY 2019 Proposed Budget, were adjusted annually thereafter based upon assumed cost escalation factors that were reviewed and validated with City staff (with the exception of annual debt service expenses which reflect the repayment schedules of each existing outstanding bond/loan).

3.2.4 Debt Service

The annual debt service schedules for the existing revenue bonds and state revolving loans were provided by City staff and included in the RSA. In addition, the RSA includes estimated debt service as calculated by the financial planning module for future financings necessary to fund portions of the CIP.

3.2.5 Capital Improvement Program

City staff provided the multi-year CIP in project level detail by year through FY 2027. Beginning in FY 2019, the RSA includes an annual cost inflation factor of 3.0% (based upon recent increases observed in the Engineering News Record Construction Cost Index) to account for the inflation in the future cost of construction. Additionally it has been assumed that the CIP will be executed at 100% in each year of the projection period. In total, the CIP (including inflation) from FY 2018 – FY 2027 is approximately \$217.9 million for water and \$62.5M for sewer. A list of projects and costs by year is included on Schedule 4 of Appendix A1 and A2 for the water and sewer systems, respectively.

3.3 ASSUMPTIONS

The following presents the key assumptions utilized in the conduct of the RSA.

3.3.1 Cost Escalation

Annual cost escalation factors for the various types of operating and maintenance expenses were developed based upon City staff estimates, a review of historical trends, observed industry experience, and detailed discussions with City staff. The specific escalation factors assumed for the various categories of expenses for each system can be found on Schedule 6 of Appendices A1 and A2.

3.3.2 Interest Earnings on Fund Balances

Interest Income is calculated annually based upon projected average fund balances and assumed interest rates of 1.25% in FY 2018, 1.50% in FY 2019, 1.75% in FY 2020 and 2.00% in FY 2021 and each year thereafter.

3.3.3 Customer Growth & Volume Forecast

New connection and billed volume projections were based upon a review of historical data for each customer class from FY 2012 through FY 2016, observance of local environmental and economic conditions, and discussions with City staff regarding the anticipated number of new service connections to the Utility and recent observed trends in water demands.

As part of developing the growth assumptions presented herein, a detailed review of growth by rate or customer class over the past five years was performed. The recent growth trends were discussed with City staff in the context of current development activity to determine reasonable projections of system growth based upon the current local environmental and economic conditions.

The assumed customer growth in the RSA represents an expectation of 1,000 new residential water and sewer equivalent billing units ("EBU") over FY 2019 and FY 2020. No other growth was included in the analysis. Growth rates are used in determining annual revenue from capital recovery charges, as well as determining the change in billed demands associated with system growth.

The Utility has seen changes in billed water demands from FY 2012 to FY 2016, likely due to economic conditions, weather variability, and increasing water usage efficiency (i.e. a declining usage per account). As part of the analysis, historical trends in per account usage were evaluated and extrapolated at 75% of the average historical change in per account usage for each rate class for the projection period. The following table displays the assumed billable demands by rate class in each year of the projection period resulting from the assumed customer growth and changes in usage per account.

Table 3-1 Water & Sewer Billed Volume Projections by Rate Class (in CCF)

| Water | FY 2017 | FY 2018 | FY 2019 | FY 2020 | FY 2021 | FY 2022 | FY 2023 | FY 2024 | FY 2025 | FY 2026 | FY 2027 |
|--------------------|-----------|-----------|-----------|-----------|-----------|-----------|-----------|-----------|-----------|-----------|-----------|

| Total CCF | 4,080,986 | 4,061,143 | 4,067,180 | 4,072,744 | 4,053,024 | 4,033,600 | 4,014,466 | 3,995,618 | 3,977,053 | 3,958,765 | 3,940,751 |

3.3.4 Minimum Reserve Policy

Reserve balances for utility systems are funds set aside for a specific cash flow requirement, financial need, project, task, or legal covenant. These balances are maintained in order to meet short-term cash flow requirements, and at the same time, minimize the risk associated with meeting the financial obligations and continued operational and capital needs under adverse conditions. The level of reserves maintained by a utility is an important component and consideration of developing a utility system multi-year financial management plan.

Many utilities, rating agencies, and the investment community as a whole place a significant emphasis on having sufficient reserves available for potentially adverse conditions. The rationale related to the maintenance of adequate reserves is twofold. First, it helps to assure a utility that it will have adequate funds available to meet its financial obligations during unusual periods (i.e. when revenues are unusually low and/or expenditures are unusually high). Second, it provides funds that can be used for emergency repairs or replacements that can occur because of natural disasters or unanticipated system failures.

The City currently has established financial policies that include minimum reserve levels for the Utility. Financial policies should articulate how these balances are established, their use, and how to determine the adequacy of the reserve fund balances. Once reserve policies are established, they should be reviewed annually during the budgeting process to monitor current levels and assure conformance with stated policies and practices. Decisions can be made to maintain, increase, or spend down the reserve balances, as appropriate, depending upon the impact of such decisions to the upcoming budget period.

Moreover, a utility should review the approach used to establish reserve policies every three to five years. This time frame is appropriate given that debt levels and capital infrastructure activity can vary during this time, which would have an effect on the appropriate level of reserve balances. This type of review allows for the philosophy of establishing reserve targets to be modified to reflect existing conditions and issues.

The financial management plans presented in this report assume that the Utility will maintain a minimum reserve that is at least equal to 6 months of annual operations and maintenance (O&M) expenses for the water and sewer funds, respectively. These levels of operating reserves are very consistent with 1) observed industry experience for similar systems, 2) the findings of reserve studies conducted by the AWWA, and 3) a healthy level of reserves for a municipal utility system per the evaluation criteria published by the municipal utility rating agencies (Fitch, Moody's, and Standard & Poor's).

3.3.5 Future Borrowing & Capital Funding

To the extent that any new debt is required during the projection period, the RSA assumes revenue bonds (RB) would be utilized with a 30-year term at an interest rate of 3.00% in FY 2017, escalating 25 basis points to 4.00% by FY 2021, and held constant thereafter. Specifically, the RSA reflects the issuance of new debt to fund a portion of the CIP in each year that current resources are inadequate to fully fund the CIP with cash. Full annual debt service requirements have been projected to begin the following year after issuance. It is expected that new borrowing will be required for both the water and sewer systems during the projection period, however, the exact amount, timing, and structure of financing will be determined by City staff based upon then-current needs and conditions.

3.3.6 Debt Service and Coverage

One of the most important covenants the Utility makes relative to the issuance of debt is that its annual net revenues will be at least 1.25 times greater than its senior lien debt service requirements.

It is important to note that these revenue covenants (often referred to as debt service coverage requirements) represent the Utility's minimum requirements. Should the Utility be unable to meet these requirements, it could be found in technical default. This would result in the Utility facing a potential downgrade in its credit rating, which would affect the interest rate and terms of any future financing initiatives. As a policy decision, utilities often measure revenue sufficiency and set rates based upon a higher debt service coverage level so as to ensure compliance with these type of covenants in the event future projections of revenue and expenses do not occur as predicted (due to extended drought conditions, unanticipated capital requirements or operating cost increases, natural disasters, etc.). As such, the financial management plan presented herein for the water and sewer systems reflects a minimum debt service coverage ratio for senior lien as well as subordinate debt that is greater than 1.50 throughout the projection period, which is indicative of a financially healthy or strong utility system per the evaluation criteria published by each of the major municipal utility rating agencies.

3.4 RESULTS

Based upon the data, assumptions, and policies presented herein, the Utility's current water and sewer rates will not provide sufficient revenue to meet its ongoing debt service, capital, operating, and reserve requirements over a multi-year projection period. As such, the RSA developed a financial management plan and corresponding plan of water and sewer rate revenue increases that will meet the Utility's current and projected cost requirements. The RSA identified the necessary increases for FY 2019 through FY 2027 that would provide adequate revenue to meet the projected requirements of the Utility through the projection period. Based on discussions with City staff, the rate increase adjustments presented herein are intended for implementation mid-fiscal year in FY 2019 (January 1st, 2019) and at the start of the fiscal year (July 1st) in each subsequent fiscal year. In FY 2019, cost of service-based rate adjustments are intended to be accomplished on 7/1/2018, in advance of the identified revenue adjustment.

Table 3-2 Rate Revenue Adjustment Projections

| | FY 2019 | FY 2020 | FY 2021 | FY 2022 | FY 2023 | FY 2024 | FY 2025 | FY 2026 | FY 2027 |
|-------|---------|---------|---------|---------|---------|---------|---------|---------|---------|
| Water | 6.00% | 6.00% | 6.00% | 6.00% | 6.00% | 6.00% | 6.00% | 6.00% | 6.00% |
| Sewer | 7.00% | 7.00% | 7.00% | 7.00% | 7.00% | 7.00% | 7.00% | 7.00% | 7.00% |

Appendix A1 and A2 includes detailed schedules presenting all components of the financial management plan developed for the Utility. At the conclusion of the Study, the financial planning modules for both water and sewer were provided to City staff for the City's future beneficial use. As such, it is recommended that the Utility annually re-evaluate the level of adjustments identified herein as part of the budget process in order to capture the most up-to-date data with regards to revenues, operating expenses, capital investment needs, local economic conditions, volumetric demands, etc.

Additionally to provide context, a local comparative residential monthly bill analysis was conducted based upon current FY 2018 rates, the City's average residential use (18 CCF per quarter), and the average stormwater bill in the City. Figure 3-3 includes a combined water, sewer and stormwater residential bill calculation for the City based upon its current FY 2018 rates as well as the proposed rates resulting from this Study. As can be seen, the City is very comparable in cost for a typical user in its geographic area. Additionally, it should be noted that rate surveys only show the relative level of bill differentials between communities, and there are often level of service and other differences between communities that are not readily apparent. For example, the current stormwater rates in the City reflect the community's desire for a very high level of service.

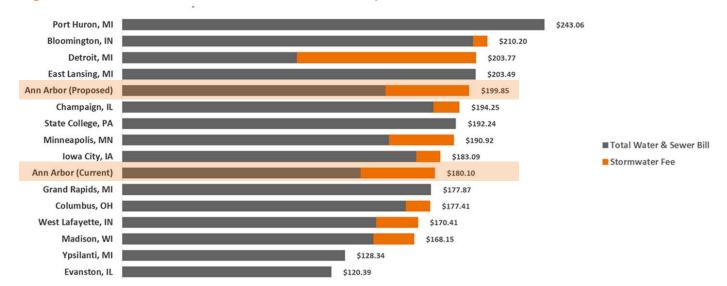

Figure 3-3 Combined Water & Sewer Bill at 18 CCF per Quarter

4. COST OF SERVICE

A cost of service (COS) analysis was performed for both the water and sewer utility systems in order to identify the functional cost of providing each service and to assign that cost proportionality to each rate class based upon their unique contributions to or use of each system function. The legal environment within the State of Michigan requires that municipal service providers construct rates or user fees that adhere strictly to proportionality and cost of service principles. As such, every effort has been made to enhance the defensibility of the Utility's cost of service allocations, promote transparency, and ensure that the Utility's rates are fair and equitable for all customer or rate classifications.

In summary, the COS analysis determined the allocation of FY 2018 cost and corresponding revenue requirements between rate classifications using cost allocation guidelines and methods from the American Water Works Association (AWWA) and Water Environment Federation (WEF). Revenue requirements are defined as the amount of money the Utility must recover from the rates charged to its rate classes in order to meet its annual operating and capital expenditures.

The full annual prospective cost requirements of the Utility are described in detail within Section 3 of this report. However, for purposes of evaluating cost allocations to and revenue collection from rate classes, FY 2018 has been determined as a reasonable test year. As indicated previously, the cost of service-based rate structure adjustments resulting from this Study are intended to be implemented on 7/1/18 on a revenue neutral basis to ensure transparency of changes necessitated by the COS analysis. Subsequently, the needed increase in rates to satisfy the FY 2019 cost requirements of the Utility identified in Section 3 of this report is intended to be applied to the new rates presented herein on 1/1/19.

4.1 REVENUE REQUIREMENT SUMMARY

The annual cost of service for the City's water and sewer systems includes total operating and capital expenditures (including debt service requirements, reserve contributions, and cash funding of CIP). As can be seen in Table 4-1, the Utility receives revenue from other sources that partially offset its annual cost of service and reduce the portion of the cost of service that has to be recovered from its rates and charges (the remaining portion of the cost of service is often referred to as the "rate revenue requirement"). Specifically, these offsetting funding sources or revenues include:

- Sale for Resale Revenue
- Use of Fund Balances
- Inter-fund Transfers
- System Development Fees
- Miscellaneous Charges and Services
- Interest Earnings

| Description | Water | Sewer |
|--|--------------|--------------|
| Operating and Maintenance Expenses | \$18,451,001 | \$15,904,025 |
| Annual Debt Service - Outstanding Debt | 4,104,574 | 9,457,683 |
| Cash Funded Capital Projects | 10,172,250 | 3,867,883 |
| | | |
| Total Cost of Service | \$32,727,825 | \$29,229,591 |
| | | |
| Less: Offsetting Revenue | | |
| Use of Fund Balance | 2,680,000 | 1,700,000 |
| Sale for Resale Revenues | 2,379,531 | 3,748,440 |
| System Development fees | 1,275,000 | - |
| Miscellaneous Fees & Charges | 666,700 | 241,815 |
| Transfers In | 1,440,905 | - |
| Interest Earnings | 270,246 | 25,000 |
| Private Fire Protection | 25,711 | |
| Total Rate Revenue Requirement | \$23,989,732 | \$23,514,336 |

Table 4-1 Summary of Cost of Service & Revenue Requirement – FY 2018

4.2 FUNCTIONALIZATION OF SYSTEM COSTS

O&M Expenses

The system functions included in the COS analysis are listed in Table 4-2, which provides a summary of the FY 2018 O&M expenses allocated to each function for the water and sewer systems. The values reflect a detailed allocation of each line item of the full operating budget performed with City staff.

Table 4-2 Summary of O&M Expenses - FY 2018

| System Function/Name | Water System O&M |
|---------------------------|------------------|
| Source of Supply | \$2,234,065 |
| Treatment | \$14,238,843 |
| Transmission/Distribution | \$12,851,499 |
| Customer | \$2,900,490 |
| Fire Protection | \$502,928 |
| Total Water O&M | \$32,727,825 |

| System Function/Name | Sewer System O&M |
|----------------------|------------------|
| Customer | \$723,082 |
| Collection | \$7,662,104 |
| Treatment | \$20,844,405 |
| Total Sewer O&M | \$29,229,591 |

Capital Expenditures

Similar to O&M, the capital costs of the Utility were allocated to system functions. Capital costs include annual debt service and cash funded capital expenditures. The cash-funded capital costs for the water system were allocated to system functions using the 5-year adopted CIP. For example, water main replacements are allocated 100% to the Transmission/Distribution function. The allocations of the 5-year CIP by function were then utilized to allocate cash funded capital costs to each function. This methodology is used when a utility system's adopted 5-year CIP is a good representation of the capital investments that will be made over time. While the 5-year CIP was allocated to functions for the sewer system, cash funded capital costs were ultimately determined to be best allocated in proportion to total expenditures, and fixed assets were utilized to allocate existing debt service for each system respectively.

Table 4-3 Summary of 5-Year Capital Expenditures

| System Function/Name | Water System 5-Year Capital |
|---------------------------|-----------------------------|
| Sources of Supply | \$11,985,000 |
| Treatment | 31,635,000 |
| Transmission/Distribution | 34,255,000 |
| Customer | 5,256,250 |
| Total | \$83,131,250 |

| System Function/Name | Sewer System 5-Year Capital |
|----------------------|-----------------------------|
| Customer | \$0 |
| Collection | 19,488,500 |
| Treatment | 1,000,000 |
| Total | \$20,488,500 |

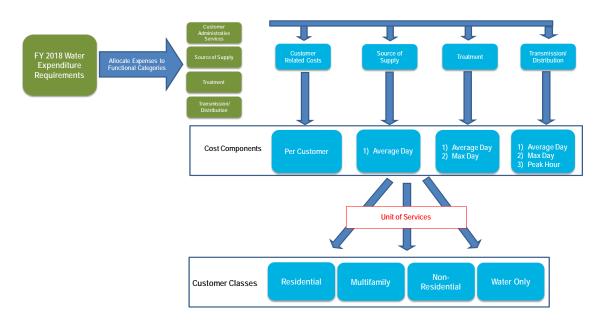

Offsetting Revenue

In a COS analysis, miscellaneous revenue or funding sources received by the Utility are used to reduce or "offset" the amount of revenue to be recovered from rates and charges. This offsetting revenue and funding sources include sales for resale, use of reserves, capital recovery fees, tap fees, miscellaneous fees, installation charges, and interest earnings. This offsetting revenue was allocated to each rate class based upon customer counts, residential equivalent units, flows, or in proportion to expense allocations, as appropriate. A full list of the offsetting revenue (and allocations) is included in Appendix B1 and B2.

4.3 COST ALLOCATION FRAMEWORK

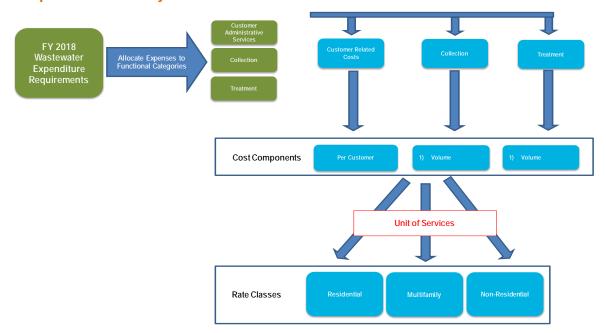

The cost of service methodology utilized for the water system was the Base-Extra Capacity method as identified in AWWA Manual M-1, Principles of Water Rates, Fees, and Charges. This method is best utilized in situations where one of the main drivers of cost is meeting seasonal demands placed on the

system. In the Utility's case, the amount of water delivered from the minimum month (usually February) to the maximum month (usually July) essentially doubles.

Graphic 4-4 Summary of Water Cost Allocation Process

With regards to the sewer cost allocation process, the Utility does not have any monitored industries with stronger than domestic wastewater loadings that would otherwise require a more detailed cost of service analysis. As such, the sewer COS followed a simplified approach in which the costs of each function were distributed using either customer counts or billed volume.

Graphic 4-5 Summary of Sewer Cost Allocation Process

Many functions of the water and sewer systems are appropriately associated with a single unit of service, such as Source of Supply to meeting total or average day demands. However, certain water system functions are sized for and serve multiple types of demands. In those instances, functions were allocated based on ratios of average, daily, and hourly water plant production data provided by City staff.

| Water System Function | Avg-Day | Max-Day | Max-Hour | Customer | Fire Protection |
|-------------------------------|---------|---------|----------|----------|--------------------|
| Source of Supply | 100% | 0% | 0% | 0% | 0% |
| Treatment | 53% | 47% | 0% | 0% | 0% |
| Transmission/ Distribution | 29% | 26% | 45% | 0% | 0% |
| Customer | 0% | 0% | 0% | 100% | 0% |
| Fire Protection | 0% | 0% | 0% | 0% | 100% |

Table 4-6 Summary of Functional Component Assignment to Units of Service

| Sewer System Function | Customer | Volume |
|-----------------------|----------|--------|
| Customer | 100% | 0% |
| Collection | 0% | 100% |
| Treatment | 0% | 100% |

Based upon the functionalization of costs and unit of service assignments presented above, the following tables show the resulting allocation of system costs by function to each unit of service category that are then distributed to customer or rate classes based upon their respective units of service.

| Water System Function | Avg-Day | Max-Day | Max-Hour | Customer | Fire Protection | Total |
|-------------------------------|--------------|-------------|-------------|-------------|--------------------|--------------|
| Source of Supply | \$2,234,065 | \$0 | \$0 | \$0 | \$0 | \$2,234,065 |
| Treatment | \$7,576,219 | \$6,662,624 | \$0 | \$0 | \$0 | \$14,238,843 |
| Transmission/ Distribution | \$3,770,844 | \$3,316,128 | \$5,764,527 | \$0 | \$0 | \$12,851,499 |
| Customer | \$0 | \$0 | \$0 | \$2,900,490 | \$0 | \$2,900,490 |
| Fire Protection | \$0 | \$0 | \$0 | \$0 | \$502,928 | \$502,928 |
| Total: | \$13,581,128 | \$9,978,752 | \$5,764,527 | \$2,900,490 | \$502,928 | \$32,727,825 |

Table 4-7 Summary of Functional Component Assignment to Units of Service in Dollars

| Sewer System Function | Customer | Volume | Total |
|-----------------------------|-----------|--------------|--------------|
| Administration/ Customer | \$723,082 | \$0 | \$723,082 |
| Collection | \$0 | \$7,662,104 | \$7,662,104 |
| Treatment | \$0 | \$20,844,405 | \$20,844,405 |
| Total: | \$723,082 | \$28,506,509 | \$29,229,591 |

4.4 CUSTOMER CHARACTERISTICS

Water System

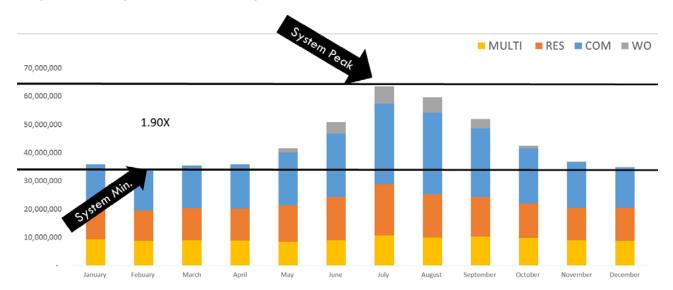

Individual customer demands vary depending on the nature of the utility use at the location where service is provided. For example, water service demand for a family residing in a typical single-family home is different than the water service demand for an irrigation-only customer, primarily due to peak use behavior which drives the need for larger infrastructure. As a practical matter, it is not feasible to allocate system costs at the individual account level. As such, the industry standard, as promulgated by AWWA's M1 Manual, is to group customers with similar characteristics into classes. Rates are then developed for each class, with each customer paying the class' average allocated cost of service for use of the system.

The Utility's current water and sewer rate classes include:

- Residential*
- Commercial
- Water Only

*Residential customers include multifamily accounts with less than five units, while larger multifamily customers are currently classified as Commercial. Additionally, Residential customers with a separate Water Only meter are charged tier 1 and tier 2 rates only for their water use on the domestic meter.

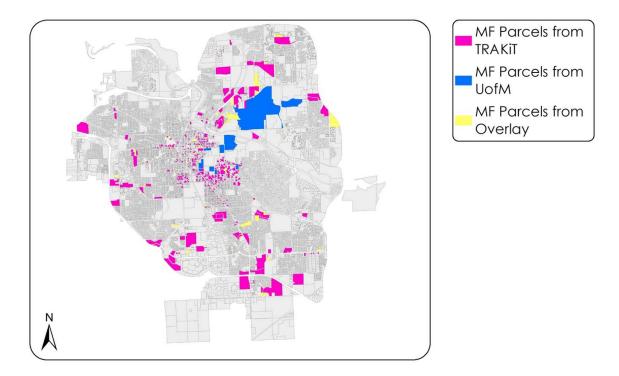

In evaluating the Utility's current rate classes, the City was uniquely able to provide advanced metering infrastructure (AMI) data, which allows for a more granular understanding of customer use characteristics in determining appropriate rate classes. Through this analysis, the merits of a new multifamily rate class was contemplated. By combining the AMI usage data, University of Michigan dormitory data, and the City's rental housing database (TRAKiT), approximately 2,400 multifamily customers were identified and their usage characteristics were compared to those of the other rate classes. The following graphic displays the monthly volumetric usage by rate class over calendar year 2016.

Graphic 4-8 Comparison of Multifamily to Other Rate Classifications

As can be seen, the multifamily class has unique trends in water usage. Specifically, the multifamily class *as a whole* displays little seasonal demand changes (however, that is not to say that individual customers within the class do not have such changes). The absence of large seasonal demand fluctuations is important, as significant portion of the water system investment that the Utility has made is to serve peak demands. Based on these initial findings, a multifamily rate class was created for further exploration throughout the COS analysis. The following graphic displays a map of the identified multifamily customers in the community. Additionally, it highlights the use of multiple data sources in order to identify as many multifamily properties as possible. Although the analysis included herein evaluated multifamily accounts

with 5 units or greater, City staff conducted a separate analysis that evaluated the usage characteristics for 3 and 4 unit multifamily customers. City staff's analysis identified that these customers have similar demand characteristics and should be added to the multifamily rate classification upon implementation.

Graphic 4-9 Comparison of Multifamily Customer Data Sources

As such, the proposed water and sewer rate classes for the Utility include:

- Residential
- Multifamily
- Non-Residential
- Water Only

Using FY 2016 AMI data, units of service for average day, maximum day, and peak hour demands were developed for each proposed rate class. The Utility had a substantially complete dataset of daily demands for all active accounts, and a partial data set of hourly demands for a subset of accounts within each rate class. The detailed information available from the City's AMI system relative to daily and hourly customer demands is unique, and offers an opportunity to have an enhanced cost of service allocation based upon local observations of actual customer usage characteristics. In summary, the units of service relied upon in the COS analysis are presented in the following graphic and table.

Graphic 4-10 AMI Derived Peaking Factors

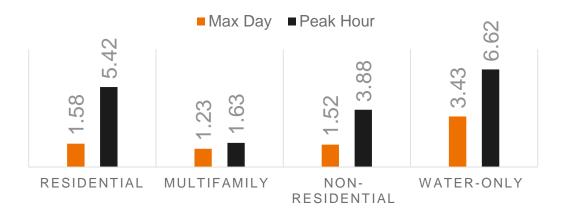

Table 4-11 Summary of Water System Units of Service

| Customer Class | # of Meters/ Units | Total Annual Usage (CCF) | Avg. Day Usage (CCF) | Max-Day Usage (CCF) | Max-Hour Usage (CCF) |
|-----------------|--------------------------|-----------------------------|-------------------------|------------------------|-------------------------|
| Residential | 22,065 | 1,549,743 | 4,246 | 6,708 | 23,013 |
| Multifamily | 2,178 | 1,547,950 | 4,241 | 5,216 | 6,913 |
| Non-Residential | 3,619 | 2,107,118 | 5,773 | 8,775 | 22,399 |
| Water Only | 542 | 675,275 | 1,850 | 6,346 | 12,247 |
| Totals | 28,404 | 5,880,086 | 16,110 | 27,045 | 64,572 |

Wastewater System

Customer counts and billed sewer volume by rate class were used to allocate wastewater system costs and rate revenue requirements to rate classes. Industry guidelines promote two primary approaches to allocating wastewater costs: the quantity/quality approach and the surcharge approach. Under the quantity/quality approach, each class' waste is measured and rates are based on the amount of pollutants discharged to the system. With the surcharge approach, all rate classes are assumed to contribute average domestic strength waste. Those monitored users discharging above a certain limit are assessed a high strength surcharge. The City follows the surcharge approach for recovering wastewater costs. In summary, the units of service relied upon in the COS analysis are presented in the following table.

Table 4-12 Summary of Sewer System Units of Service

| Customer Class | # of Meters/ Units | Flow (CCF) |
|-----------------|--------------------------|---------------|
| Residential | 24,515 | 1,539,766 |
| Multifamily | 1,146 | 448,308 |
| Non-Residential | 3,459 | 2,727,664 |
| Totals | 29,120 | 4,715,738 |

4.5 COST TO SERVICE EACH RATE CLASS

Once the FY 2018 costs were allocated to functions, each rate class' units of service were applied to establish the gross cost to serve each rate class.

Table 4-13 Summary of Cost to Serve by Customer Class

| System Function | Single Family | Multifamily | Non- Residential | Water Only | Total |
|--------------------|---------------|-------------|---------------------|-------------|--------------|
| Customer | \$2,253,180 | \$222,408 | \$369,556 | \$55,347 | \$2,900,491 |
| Average Day | \$3,586,189 | \$3,582,041 | \$4,875,985 | \$1,562,624 | \$13,606,839 |
| Max Day | \$2,247,127 | \$890,072 | \$2,739,254 | \$4,102,298 | \$ 9,978,751 |
| Peak Hour | \$2,504,525 | \$260,586 | \$2,092,837 | \$906,580 | \$5,764,528 |
| Fire Protection | \$266,874 | \$79,028 | \$131,314 | \$0 | \$477,216 |
| Total: | \$10,857,895 | \$5,034,135 | \$10,208,946 | \$6,626,849 | \$32,727,825 |

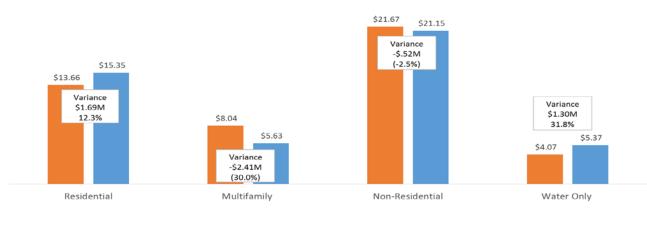

| System Function | Single Family | Multifamily | Non-Residential | Total |
|--------------------|---------------|-------------|-----------------|--------------|
| Customer | \$608,735 | \$28,456 | \$85,891 | \$723,082 |
| Collection | \$2,501,805 | \$728,403 | \$4,431,896 | \$7,662,104 |
| Treatment | \$6,806,047 | \$1,981,587 | \$12,056,771 | \$20,844,405 |
| Total: | \$9,916,587 | \$2,738,446 | \$16,574,558 | \$29,229,591 |

Subsequently, offsetting revenues were allocated to each rate class and deducted from the cost of service allocations (See Appendices B1 and B2 for details) shown in Table 4-13 to determine the revenue requirement or net cost to serve each rate class shown in the table below.

| Rate Class | Water | Sewer | Total |
|-----------------|--------------|--------------|--------------|
| Residential | \$7,475,072 | \$7,875,482 | \$15,350,554 |
| Multifamily | \$3,420,881 | \$2,212,960 | \$5,633,841 |
| Non-Residential | \$7,725,190 | \$13,425,894 | \$21,151,084 |
| Water Only | \$5,368,589 | \$0 | \$5,368,594 |
| GRAND TOTAL | \$23,989,732 | \$23,514,336 | \$47,504,068 |

Table 4-14 Summary of Revenue Requirement for Each Rate Class

It is important to note that the recommended rate structure presented in the following section of this report does not include the identified rate revenue adjustment for mid-year FY 2019. The recommended rates presented herein are "revenue neutral", and only reflect the distribution of revenue necessary to bring revenue by rate class into alignment with the cost to serve each class. The following graphic displays the results of the cost of service analysis for both water and sewer combined, and shows the relative comparison between the cost to serve each rate class and the current revenue collected from the same rate classes. From the graphic, it is evident that the Residential and Water Only rate classes are being charged less than the cost to serve them, while the rates being applied to Multifamily and Non-Residential (i.e. commercial) customers are recovering more than the identified cost to serve those classes. Given the length of time since the Utility's last cost of service study, better data from its AMI system, and industry allocation methodology improvements, these types of differences are to be expected.

Graphic 4-13 Current Revenue and Cost to Serve Comparison

Revenues Cost to Serve (\$ in Millions)

5. RATE CALCULATION

The Study included an examination of the City's current water and sewer rates and development of recommended rate structure modifications that i) fairly and equitably recover the City's identified cost to serve each respective rate class, ii) conform to accepted local and national industry practices, iii) ensure fiscal stability and reasonable recovery of fixed costs, and iv) minimize administrative burden and enhance the ability to be easily understood by stakeholders.

The Utility's existing rate structure is comprised of quarterly fixed charges by meter size and volumetric charges per CCF (commonly referred to as a "Unit" for billing purposes) that vary by rate classification. The existing volumetric water rates for Residential customers is a three-tier inclining block rate structure, while all other water rate classes have a unique uniform volumetric rate applied to all consumption. The Utility's sewer rates include the same quarterly fixed charges as water service, and a uniform volumetric rate applicable to all rate class for all billed sewer volume. Additionally, it is important to note that the Utility applies a 10% discount for prompt payment by the due date. *As such, all current and proposed bill calculations included in this section of the report <u>include</u> the 10% discount unless otherwise noted.*

The following page includes a summary of the current rates and charges of the Utility for each rate classification or customer class.

| Meter Size | Current | | |
|------------|---------|----------|--|
| 5/8 | \$ | 11.25 | |
| 3/4 | \$ | 16.55 | |
| 1 | \$ | 30.30 | |
| 1.5 | \$ | 62.00 | |
| 2 | \$ | 97.00 | |
| 3 | \$ | 95.00 | |
| 4 | \$ | 308.00 | |
| 6 | \$ | 613.00 | |
| 8 | \$ | 1,225.00 | |
| 10 | \$ | 1,960.00 | |

Current FY 2018 Water and Sewer Fixed Quarterly Charges by Meter Size:

FY 2018 Water Volumetric Rates (\$/CCF or Unit, Showing Quarterly Consumption in Each Tier):

- Residential¹
 - Tier 1: up to 7 CCF, \$1.55
 - o Tier 2: over 7 to 28 CCF, \$3.37
 - o Tier 3: over 28 CCF, \$5.89
- Commercial²
 - o Peaking 1, \$3.81
 - o Peaking 2, \$7.26
 - o Peaking 3, \$12.44
- Water Only
 - o All Use \$5.89

FY 2018 Sewer Volumetric Rate (\$/CCF, Note: Residential Volume Based on Winter Quarter Average):

- All Customers
 - o All Use, \$4.58

² Peaking 1: factor less than 5, Peaking 2; factor between 5 and 8, Peaking 3; factor greater than 8

¹ Residential customers with a separate water only meter are classified RES 2 and only have the first 2 tiers apply to their consumption.

5.1 QUARTERLY FIXED CHARGES

Common industry practice is to develop a two-part rate structure comprised of both fixed and variable charges. Generally accepted practice recovers a portion of system costs in a fixed charge, recognizing that utilities have substantial cost that are customer-specific such as meter replacement, public fire protection, and customer service costs that are incurred year-round. Utilities incur these fixed costs regardless of water use. Failure to establish a proper level of fixed cost recovery subjects the Utility to revenue volatility in certain conditions, such as abnormal weather or economic events.

During the conduct of the Study, several observations were made relative to level of the Utility's fixed charges. As part of preparing comparative rate surveys, it was noted that the City has some of the lowest fixed charges of the entities surveyed. Moreover, the current fixed charges only represent about 12% of the Utility's annual revenue, whereas rating agency guidance and observed industry practices target 30% of annual revenue from fixed service charges. Lastly, the Utility's current charges are the same for water and sewer services, whereas many utilities will establish separate fixed charges that are unique to the cost requirements of each respective system or service.

It is recommended that the Utility update its fixed charges to reflect the current cost for meter replacement, public fire protection, and administrative activities. Specifically, the fixed charge should recover administrative costs (such as customer service, billing and collection, meter reading, etc.) equally per meter, meter replacement costs based on the specific cost and useful life of each meter size, and public fire protection costs based upon meter size (in the water charge only). It is important to note that meter replacement costs have been split evenly between water and sewer fixed charges, recognizing that the meter provides the basis for billing both water and sewer service charges. The proposed fees presented below reflect the unique cost of service by meter size for each system, conform to industry practices, and are anticipated to comprise a slightly greater percentage of the Utility's annual revenue.

| WATER S | ERVICE | SEWER S | SERVICE |
|-------------|---------|----------------------|---------|
| 5/8 " meter | \$20.89 | 5/8" meter | \$13.09 |
| 3/4" meter | 22.43 | 3/4" meter | 13.47 |
| 1" meter | 25.26 | 1" meter | 13.98 |
| 1½" meter | 33.09 | $1^{1}/_{2}$ " meter | 16.01 |
| 2" meter | 41.90 | 2" meter | 17.84 |
| 3" meter | 88.47 | 3" meter | 45.86 |
| 4" meter | 115.48 | 4" meter | 51.98 |
| 6" meter | 176.75 | 6" meter | 55.22 |
| 8" meter | 257.21 | 8" meter | 66.07 |
| 10" meter | 343.11 | 10" meter | 70.74 |

Table 5-1 Proposed Water and Sewer Quarterly Fixed Charges

5.2 VOLUMETRIC CHARGES

As indicated, adjustments to the City's current inclining block rate structure (in number, size, and pricing of each block or tier) are recommended to conform to the current cost to serve, reflect current usage profiles, strengthen legal defensibility, and improve conformance to accepted industry practices.

Table 5-2 provides a summary of the residential water usage profile used to establish the recommended water use within each tier of the inclining block rate structure presented herein. The summary table illustrates the development of the initial tier at 9 CCF per quarter, which is sufficient to provide an allowance for typical indoor domestic use of 36.7 gallons per capita per day (per the Residential End Uses of Water, Version 2, published in April of 2016 by the Water Research Foundation), and an assumed 2.0 persons per household. Incorporating readily available industry data relative to residential per person indoor water use into the tier setting process enhances the ability of the tier structure to reflect current usage profiles. The next tier spans from 9 to 18 CCF per quarter, providing an additional allowance for the indoor domestic use of larger families (which may in some cases also represent modest amounts of outdoor use by smaller families).

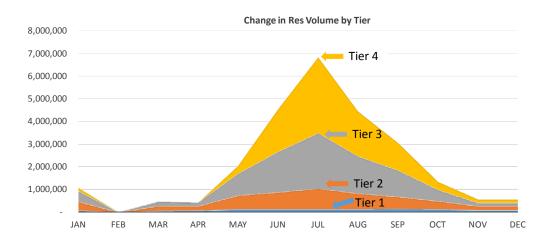

The next tier (18 to 36 CCF quarterly) would accommodate reasonable amounts of discretionary irrigation for typical properties, based on a GIS analysis of typical residential lot sizes, irrigable area, and water requirements for normal landscape in the City. The existing top tier would then be revised to include all usage over 36 CCF quarterly. Based upon FY 2016 billing data, less than 10% of all residential bills issued have usage over 36 CCF per quarter.

Table 5-2 Residential Water Usage Profile

| Tier 1 | Value | Block Max | Current |
|---|-----------|------------------|---------|
| People per Household | 2.00 | | |
| Typical Indoor Use (Gallons per Capita per Day) | 36.7 | | |
| Typical Essential Domestic Use (CCF/month) | 2.98 | | |
| First Tier Usage Amount (CCF) | 9 | 9 | 7 |
| Tier 2 | Value | Block Max | Current |
| People per Household | 4.00 | | |
| Typical Indoor Use (Gallons per Capita per Day) | 36.7 | | |
| Typical Essential Domestic Use (CCF/month) | 5.97 | | |
| Second Tier Usage Amount (CCF) | 18 | 18 | 28 |
| Tier 3 | | | |
| Typical parcel (sq. ft.) | 10,890 | | |
| Square inches of area in 1/4 acre | 2,090,880 | (calculated) | |
| % of area that is irrigable | 25% | | |
| Reference ET (inches) | 32.0 | | |
| Average annual rainfall | 36.0 | 10% | |
| Crop Coefficient | 75% | | |
| Irrigation Efficiency | 70% | | |
| Water Budget (CF per month) | 5.753 | (calculation) | |
| Third Tier Usage Amount (CCF) | 18 | 36 | >28 |
| Fourth Tier Usage Amount (CCF) | All Use | >36 | |

Once reasonable tiers were constructed using the most relevant and recent data, the rate structure analysis used the COS results to calculate the unit cost/rate for each tier. Connecting the cost of service to the volumes and seasonal demand patterns present within each tier creates a strong, proportional, and transparent relationship between the use of water and the cost of service. The following graphic displays the relative contribution of peak demands from the Residential class for each proposed tier.

It is very evident from the preceding graphic that the volumes in each tier are quite different in their contributions to peak demands, and generally reflect the usage profile employed to size each tier.

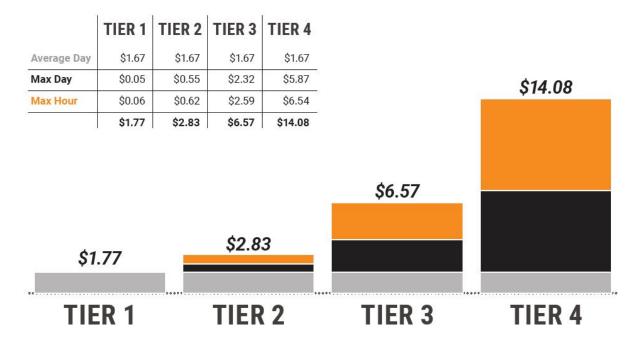

The pricing for each tier reflected the allocated proportion of the average day, maximum day, and peak hour costs for the demands in each respective tier as shown in Table 5-4 below. Max day and peak hour volumes shown are the proportional change in volume from February (system min) to July (system peak).

| Units of Service by Tier CCF | Average Day | Max Day | Peak Hour |
|------------------------------|-------------|-----------|-----------|
| Tier 1 | 674,229 | 126,100 | 126,100 |
| Tier 2 | 438,039 | 902,300 | 902,300 |
| Tier 3 | 285,236 | 2,464,900 | 2,464,900 |
| Tier 4 | 152,238 | 3,328,400 | 3,328,400 |

Table 5-4 Residential Units of Service & Cost Allocations by Tier

| System Cost by Tier | Average Day | Max Day | Peak Hour |
|------------------------|-------------|-----------|-----------|
| Tier 1 | \$1,010,380 | \$30,473 | \$33,963 |
| Tier 2 | \$656,432 | \$218,045 | \$243,021 |
| Tier 3 | \$427,447 | \$595,653 | \$663,883 |
| Tier 4 | \$228,140 | \$804,322 | \$896,453 |

As can be seen from the summary graphic on the following page, tiers 3 and 4 have a larger allocation of system costs associated with serving maximum day and peak hour demands due to their significantly great contribution to the peak demands placed on the Utility.

Graphic 5-5 Residential Water Pricing per CCF

For all other rate classes, a uniform volumetric rate based on the cost to serve each respective class was determined to be the most appropriate rate structure, similar to what is effectively in place today. The Utility presently has a sub-classification system for Non-Residential customers based on peaking factors, whereby approximately 98% of users fall in the first classification, effectively rendering the current system a uniform rate structure (which is the most common industry practice for Non-Residential customers).

While the Non-Residential, Multifamily, and Water Only rate classes do place seasonal demands on the system, the cost of serving those respective demands will be paid via a charge per CCF or Unit of water used. As a class, it is well established and supported by data (as is the case here) that Residential customers use water differently than Non-Residential, Multifamily, and Water Only customers. However, for customers within a class, such as different types of Non-Residential customers, there needs to be a rationale, data, and system for developing and administering a structure that is fair and based on the cost to serve. Within the Non-Residential class, there is a wide variety of business types with different levels of water usage requirements and metering configurations, such that charging a tiered volumetric rate for this customer class as a whole would not be fair.

For example, a small office in the City may use about 20 CCF throughout the year, and a restaurant with the same square footage may use 100 CCF throughout the year. If a second tier rate were set at 50 CCF, that would be unfair to the restaurant to charge them more for 50 CCFs, even though they are not contributing to the cost that is driving the Non-Residential peak to the system. Because Non-Residential customers have no standard activity to determine a fair way to allocate the cost of service in the pricing structure, a flat rate is the most equitable in the absence of the data, system, and resources to establish and maintain individualized customer-specific tiers. Should the City desire to evaluate non-residential tiers in the future, data relative to property size, business type, irrigable area, and peak demands (daily and

hourly) should be collected and maintained for each customer. The same rationale holds true for the Multifamily class, because there are Multifamily customers that have 5 units on one meter, and others that have 50 units. Recognizing customer-specific data requirements and system limitations, a uniform rate is the most equitable method to have these classes (and Water Only) as a whole pay for the cost of service.

Table 5-6 Water Pricing Per CCF for Other Rate Classes

Rates shown before 10% on time payment discount, Current Non-Residential rate shown is Peak factor 1

The Utility currently has a uniform volumetric rate for sewer service applicable to all rate classes based on measured water consumption in each billing cycle, with the exception that winter average water use serves as the basis of billing in summer months for the Residential class. Doing so ensures that Residential seasonal water demands likely associated with outdoor irrigation are not charged sewer. No adjustments are recommended to the Utility's current sewer volumetric rate structure as the structure conforms to accepted industry practice. As such, this analysis only updated the volumetric rate per CCF or Unit to reflect the results of the COS analysis, including the distribution of revenue requirements between fixed and volumetric charges. The resulting rate is proposed at 5.19 per CCF used per quarter.

Table 5-7 Sewer Pricing per CCF for All Rate Classes

Rates shown before 10% on time payment discount

5.3 CUSTOMER IMPACTS

When considering any rate changes, an understanding of how the proposed changes will impact different customers at various levels of water use is essential to understand and communicate. As such, several customer impact analyses were prepared as part of the Study to identify the impact of the proposed rates. The following graphics present a comparison of the current water and sewer bill as compared to the bill under the proposed rates for various customer types and water usage levels.

Graphic 5-8 Residential Quarterly Water & Sewer Bill Impact Scenario 1

5/8" meter with water and sewer service Two person household with minimal outdoor water use 8 CCF per quarter

Prices shown net 10% on time payment discount

5.4 FOOTING DRAIN DISCONNECTION CONSIDERATIONS

The City has a large number of properties that have direct connections between their stormwater management systems (footing drains) and the City's sanitary sewer system. With this service configuration, stormwater is contributed to the sanitary sewer system and is ultimately treated by the wastewater treatment plant. There are an estimated 15,000 homes connected to the sanitary sewer system, recognizing that the City has already disconnected 2,000 homes via its footing drain disconnection program. As part of the community discussion relative to footing drains, it was requested that it be considered in the context of the Study per the SSWEE Citizens Advisory Committee.

In reviewing the issue, several key challenges emerged in regards to equity, data, and precedent. With regard to equity, a customer that is now disconnected as a result of the City's program is no different to the Utility than a customer that was never connected by a footing drain. This paradigm makes providing a credit to a disconnecting customer problematic from an equity standpoint. In reviewing the practices of other municipalities (both locally and more broadly), no precedent could be found for crediting disconnected customers or billing connected customers for the additional volume coming to the utility from their footing drains (likely because the volume cannot be specifically measured). Additionally, no database exists in which each property's connection status is recorded. As such, this Study recommends that the Utility continue to communicate the benefits of disconnection footing drains from the system, and review alternative methods to support the disconnection program.

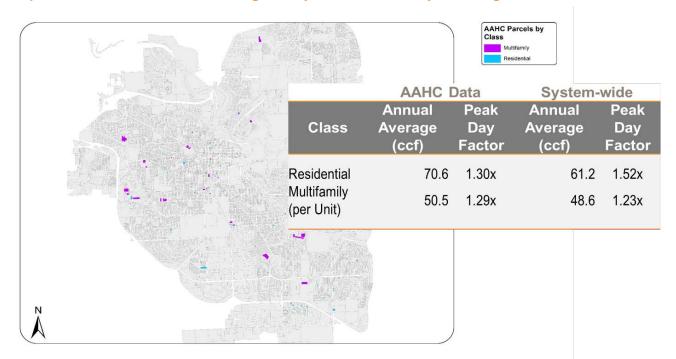

5.5 AFFORDABILITY

Throughout the Study, City staff and community members expressed a desire to understand and address utility bill affordability challenges to the greatest extent possible. As such, this Study reviewed existing data sources to identify those with potential affordability challenges, understand their water usage, and utilize approaches that address affordability to the extent possible within a cost of service framework.

The Study utilized the Utility's billing data and the Ann Arbor Housing Commissions (AAHC) data in order to identify customers with potential affordability challenges and understand how they utilize the Utility's services. Conceptually the Study identified three household types that could have affordability challenges:

- Small households with fixed income
- Large households with low income
- Multifamily properties with low income tenants

The following graphic displays the results of the data acquisition process that yielded consumption profiles for Residential and Multifamily customers with potential affordability challenges. Of note, the sample of Residential customers reviewed has a very similar annual water use as compared to the Residential class as a whole, but has a notably lower peaking factor (indicative of less seasonal demand for these households).

Graphic 5-14 Residential Water Usage Analysis – Affordability Challenged Areas

Utilities are effectively compelled by legal precedent to set utility rates that comport with cost of service results and ensure the proportionality of a customer's bill with regards to their usage of the system. The rate setting environment effectively removes the ability of the utility to set rates from anything but a cost to serve perspective. Recognizing this constraint, the Study was able to make changes that would improve affordability. First, in creating a standalone rate class for Multifamily customers based on the cost of service results, the proposed Multifamily water rates are significantly lower than those being paid today. This reduced cost will either directly flow to Multifamily customers if they are individually metered, or flow to the property owner if it is a master-metered complex (thereby potentially stabilizing rental prices).

Second, Residential customers with affordability challenges that have water consumption profiles consistent with the sample presented herein will benefit from the proposed rates that reflect the cost of service. Based on an annual usage amount of 70.6 CCF evenly distributed throughout the year, these customers should only have water consumption in tier 1 and 2. Under the proposed rate structure, these customers can be assured that they are paying rates that are for the "base" cost of the system, and do not include large allocations of system costs driven by seasonal users.

Additional steps to address affordability can and should be taken out side of the rate setting process. It is recommended that the issue be studied in more detail to understand the number of customers who are challenged. Other actions for consideration include continued partnerships with others in the community to address the issue in an organized fashion and maximize existing resources. Customer service could also provide a key linkage in this effort by proactively providing resources when contact is made with customers have affordability challenges. If existing community resources are found to be inadequate to meet the identified need, additional non-utility funding sources could be utilized.

Disclaimer

This document was produced by Stantec Consulting Services, Inc. ("Stantec") for the City of Ann Arbor and is based on a specific scope agreed upon by both parties. Stantec's scope of work and services do not include serving as a "municipal advisor" for purposes of the registration requirements of the Dodd-Frank Wall Street Reform and Consumer Protection Act (2010) or the municipal advisor registration rules issued by the Securities and Exchange Commission. Stantec is not advising the City of Ann Arbor, or any municipal entity or other person or entity, regarding municipal financial products or the issuance of municipal securities, including advice with respect to the structure, terms, or other similar matters concerning such products or issuances.

In preparing this report, Stantec utilized information and data obtained from the City of Ann Arbor or public and/or industry sources. Stantec has relied on the information and data without independent verification, except only to the extent such verification is expressly described in this document. Any projections of future conditions presented in the document are not intended as predictions, as there may be differences between forecasted and actual results, and those differences may be material.

Additionally, the purpose of this document is to summarize Stantec's analysis and findings related to this project, and it is not intended to address all aspects that may surround the subject area. Therefore, this document may have limitations, assumptions, or reliances on data that are not readily apparent on the face of it. Moreover, the reader should understand that Stantec was called on to provide judgments on a variety of critical factors which are incapable of precise measurement. As such, the use of this document and its findings by the City of Ann Arbor should only occur after consultation with Stantec, and any use of this document and findings by any other person is done so entirely at their own risk.
